

SOWER campaign 2014 and its science idea

Yoichi Inai and Masato Shiotani
Kyoto University

SOWER since 1998 (ongoing!)

(Soundings of Ozone and Water in the Equatorial Region)

- Proposed by Fumio Hasebe and Masato Shiotani
- Started in March 1998 at the Galapagos Is. by F. Hasebe & M. Shiotani, in collaboration with S. Oltmans & H. Voemel
- Many researchers and students participated
- Balloon-borne campaigns for O₃/H₂O in Tropo/Strato over tropical Pacific (western Pacific-SE Asia in recent yrs)

Accomplishments

2007

Vömel, H., J. E. Barnes, R. N. Forno, M. Fujiwara, F. Hasebe, S. Iwasaki, R. Kivi, N.

Komala, E. Kyrö, T. Leblanc, B. Morel, S.-Y. O. Saraspriya, H. Selkirk, M. Shiotani, J. Valverd
**Validation of Aura Microwave Limb Sounder
 Cryogenic Frost point Hygrometer measurements**

• Recent focus: Dehydration processes in the TTL, Match campaigns

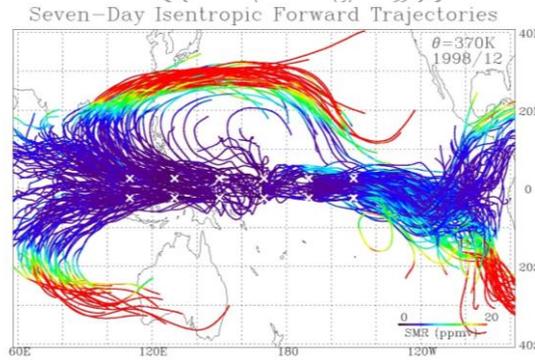

Water Vapor “Match” in the TTL

- In situ measurements of Lagrangian H₂O changes -

Inai et al., ACP, 2013

Multipoint Ozonesonde – Water-vapor-sonde Soundings in the Western Pacific

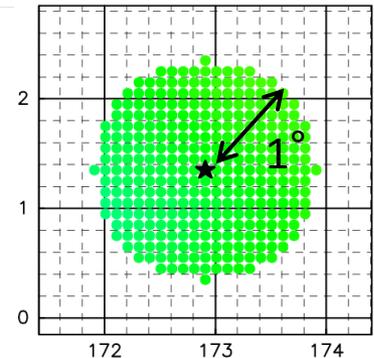

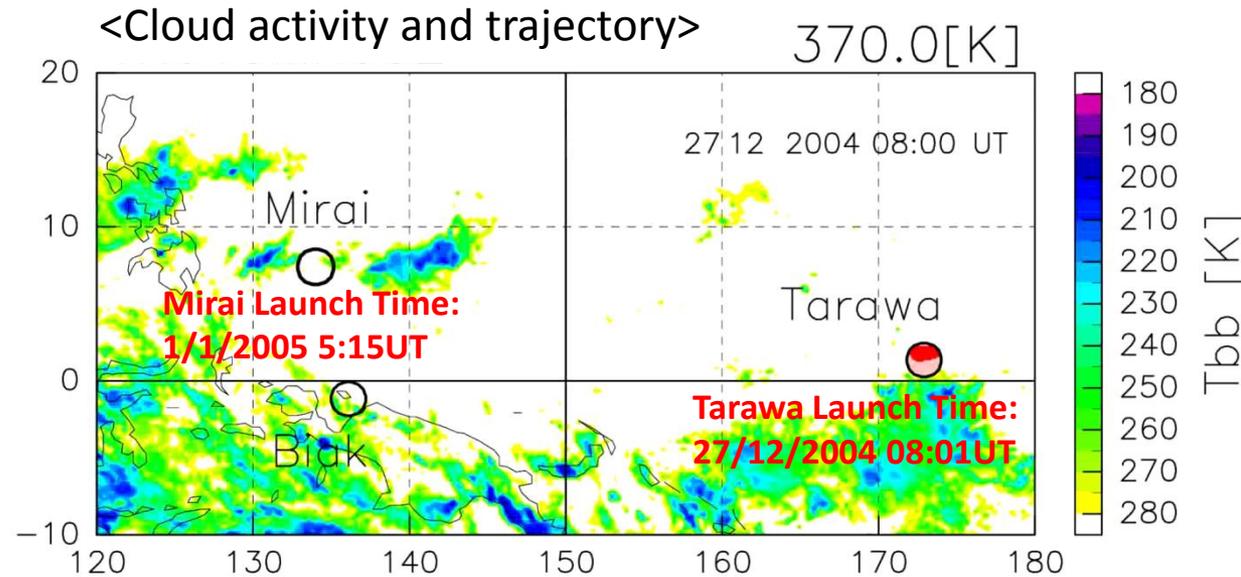

Multipoint coordinated sounding campaigns in the tropical western Pacific to measure the same air parcel twice or more (i.e., “match”) to quantify the Lagrangian H₂O changes in air parcels in the TTL

Site	Dec.2004	Jan.2006	Jan.2007	Jan.2008	Jan.2009
Bandung	4 (CFH)	-	-	-	-
Biak	3 (SW)	12 (SW), 9 (CFH)	6 (CFH)	7 (CFH)	4 (CFH)
Hanoi	8 (SW)	15 (SW)	6 (CFH)	5 (CFH)	4 (CFH)
Kototabang	-	10 (SW)	5 (CFH)	4 (CFH)	-
R/V <i>Mirai</i>	15 (SW)	-	-	-	-
Tarawa	10 (SW)	11 (SW) , 2 (CFH)	5 (CFH)	[Inai et al., ACP, 2013]	

CFH: Cryogenic Frostpoint Hygrometer (61) SW: Snow White peltier-cooler dew/frostpoint hygrometer (84)

Trajectory Calculations

Cluster of isentropic trajectories (both forward and backward)

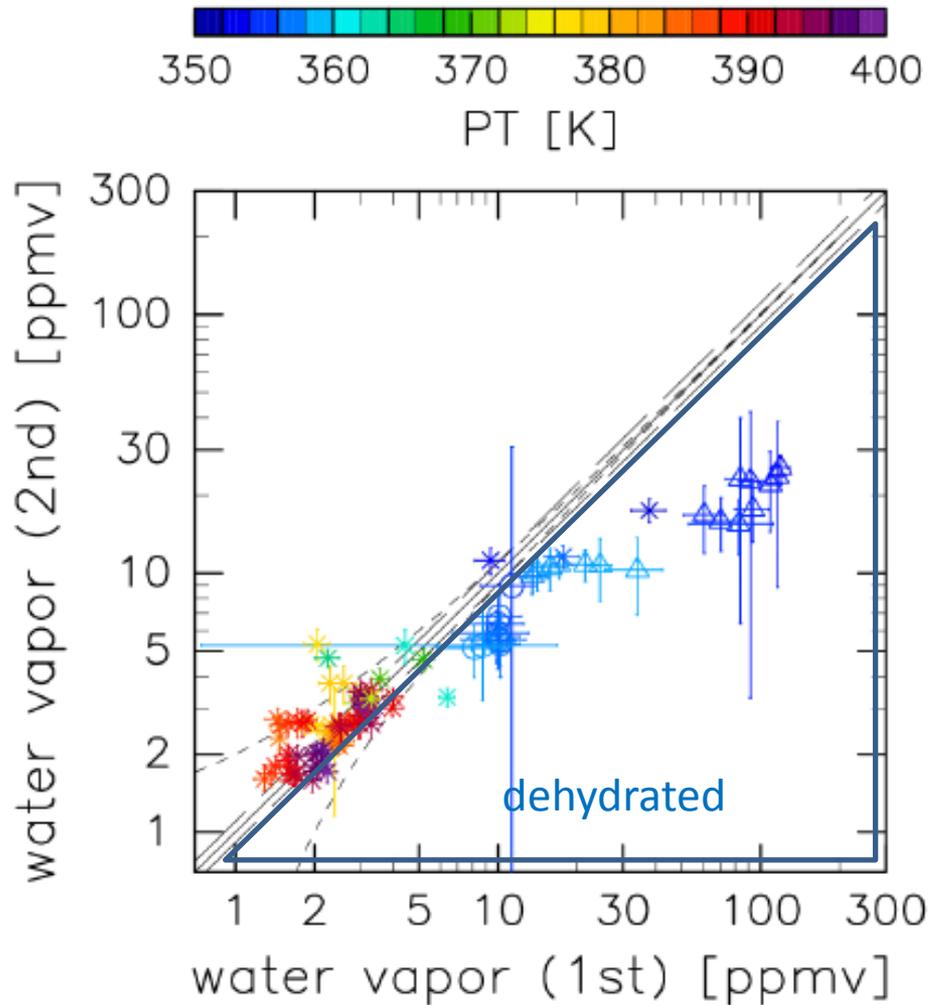

to seek sonde-to-sonde “match” cases during the SOWER campaigns

Air parcel: Circular area of 1° radius, with $0.1^\circ \times 0.1^\circ$ air segments, centered at balloon sites
 $0.2/1.0$ K at 350-360/360-400 K potential temperature levels

Meteorological data: opECMWF ($1^\circ \times 1^\circ$, L60 or L91, 6 hourly \rightarrow interpolated 1 hourly)

~ 900 preliminary “match” (connected by both forward and backward trajectories)

After intensive screening procedures \rightarrow 107 match cases were found.

Statistical Features of Dehydration

- Significant dehydration occurs below 365 K
- H₂O broadly unchanged above 365 K (for 5-day trajectories; dehydration around CPT may take much longer time)
- First direct evidence of TTL dehydration in horizontal advection
- Lack of dehydrated cases around CPT
 - Reduce the uncertainty of H₂O measurements
 - Simultaneous cloud-particle measurements
 - More sites in the central Pacific

Figure: Scatter plot of water vapor mixing ratio for the match pairs (1st sounding versus 2nd sounding) after applying all the screening processes. (107 matches, 25 different sounding pairs)

SOWER

(Soundings of Ozone and Water in the Equatorial Region) since 1998
Ongoing project

2014

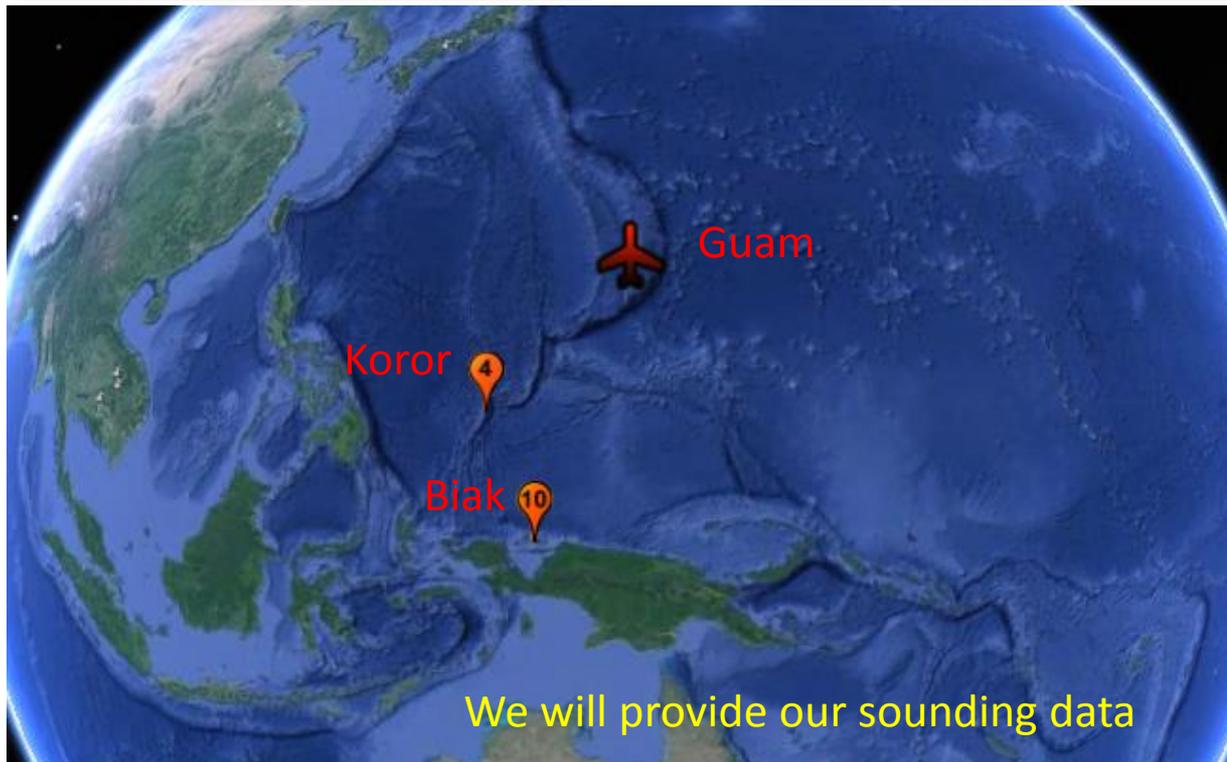

- Station: Biak
- 10 sets of CFH + ECC (Meisei)
and some additional sondes
period: Mid-Jan. – End of Feb.

JAMSTEC

- Station: Koror
- 4 sets of CFH + ECC (Meisei)
- Mie Lidar will be active
period: 2 weeks
during 20 Jan. – 12 Feb.

Payload (H₂O, O₃)

We will provide our sounding data

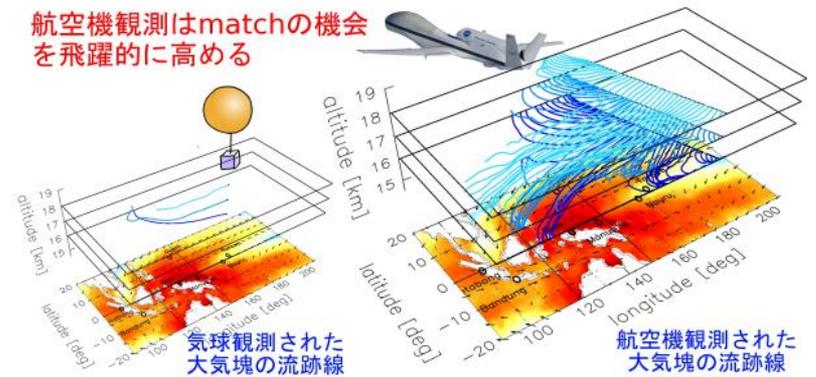

Yoichi Inai

▶ Photogallery

The Soundings of Ozone and Water in the Equatorial Region/Pacific Mission (SOWER/Pacific) has been running on a campaign basis since 1998 to improve our knowledge on the ozone and water vapor distributions in the tropical Pacific region by making coordinated radiosonde observations at three equatorial places, the Galapagos Islands (Ecuador), Christmas Island (Kiribati), and Indonesia. In addition to establishing the climatology and variabilities in ozone and water vapor, we also intend to explore controlling dynamical/chemical processes for these species and to collect correlative data for satellite data validation.
