

# *An Indian Ocean Observing System for Ocean-Atmosphere Interactions*

✓ *Motivation*

✓ *Design*

✓ *Status*

✓ *Plans*

*Mike McPhaden  
NOAA/PMEL  
Seattle, WA*

*DYNAMO Workshop  
Boulder, CO  
13 Apr 2009*

# Indian Ocean Science Drivers

Positive Dipole Mode

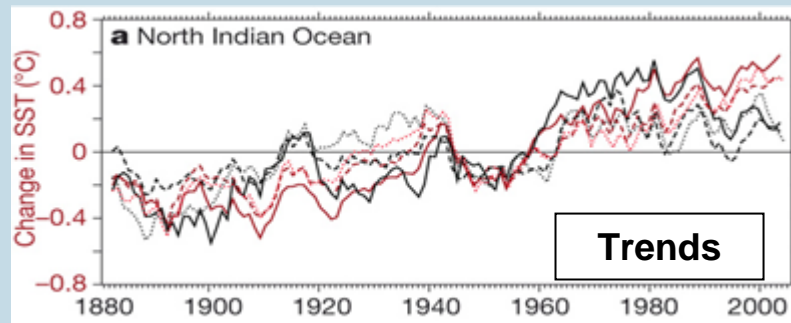

Negative Dipole Mode

Indian Ocean Dipole

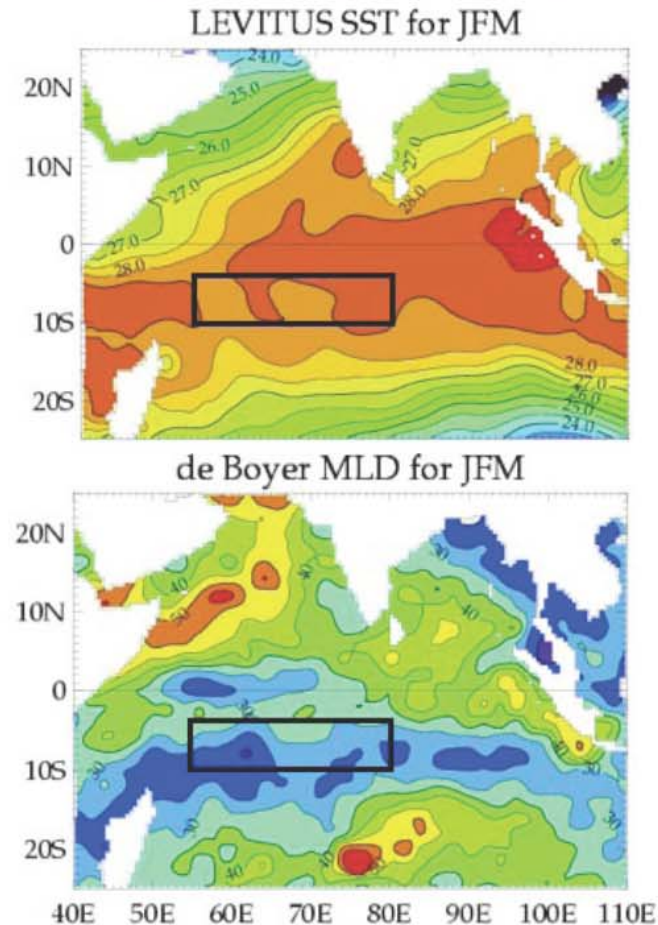

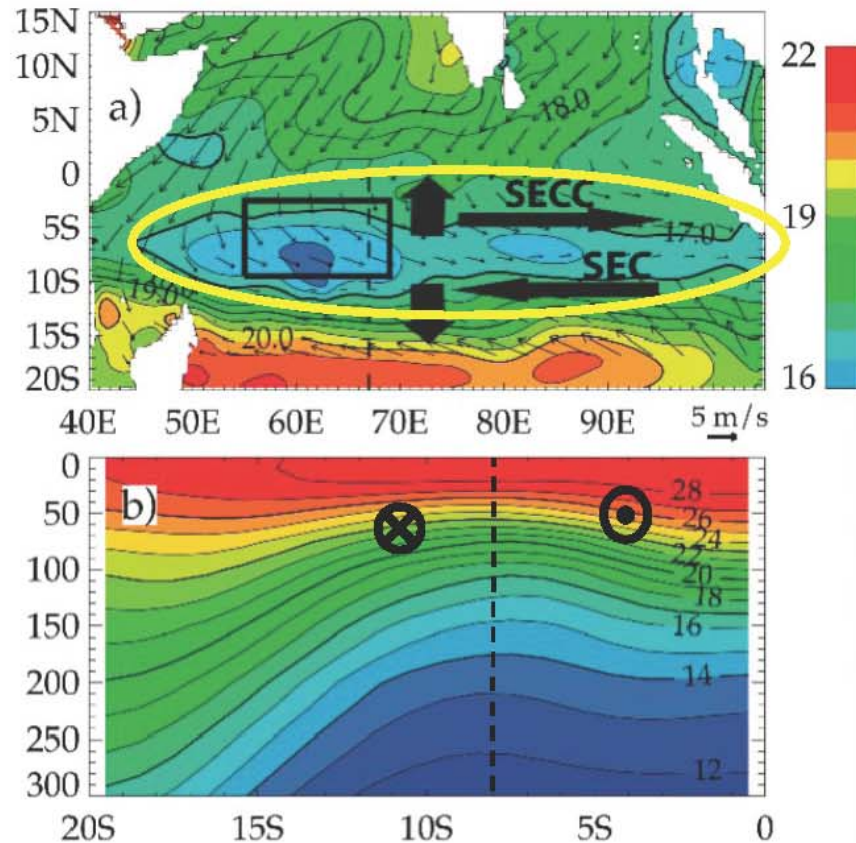

- Seasonal monsoons
- Severe weather events & cyclones
- Intraseasonal (30-60 day) Madden Julian Oscillation (affects cyclones & hurricanes, monsoon rains, ENSO, US weather)
- Interannual variations: the Indian Ocean Dipole
- Decadal variability and warming trends (affects North American climate, Sahel rainfall, NAO)

# The thermocline ridge and its phenomenology

## ● The Seychelles-Chagos thermocline ridge

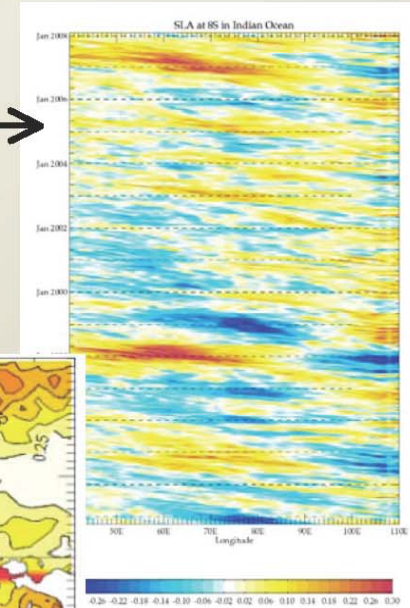

**High SST, shallow thermocline and mixed layer => strong Air-Sea coupling**

(Vialard et al. 2008a; in press in BAMS)

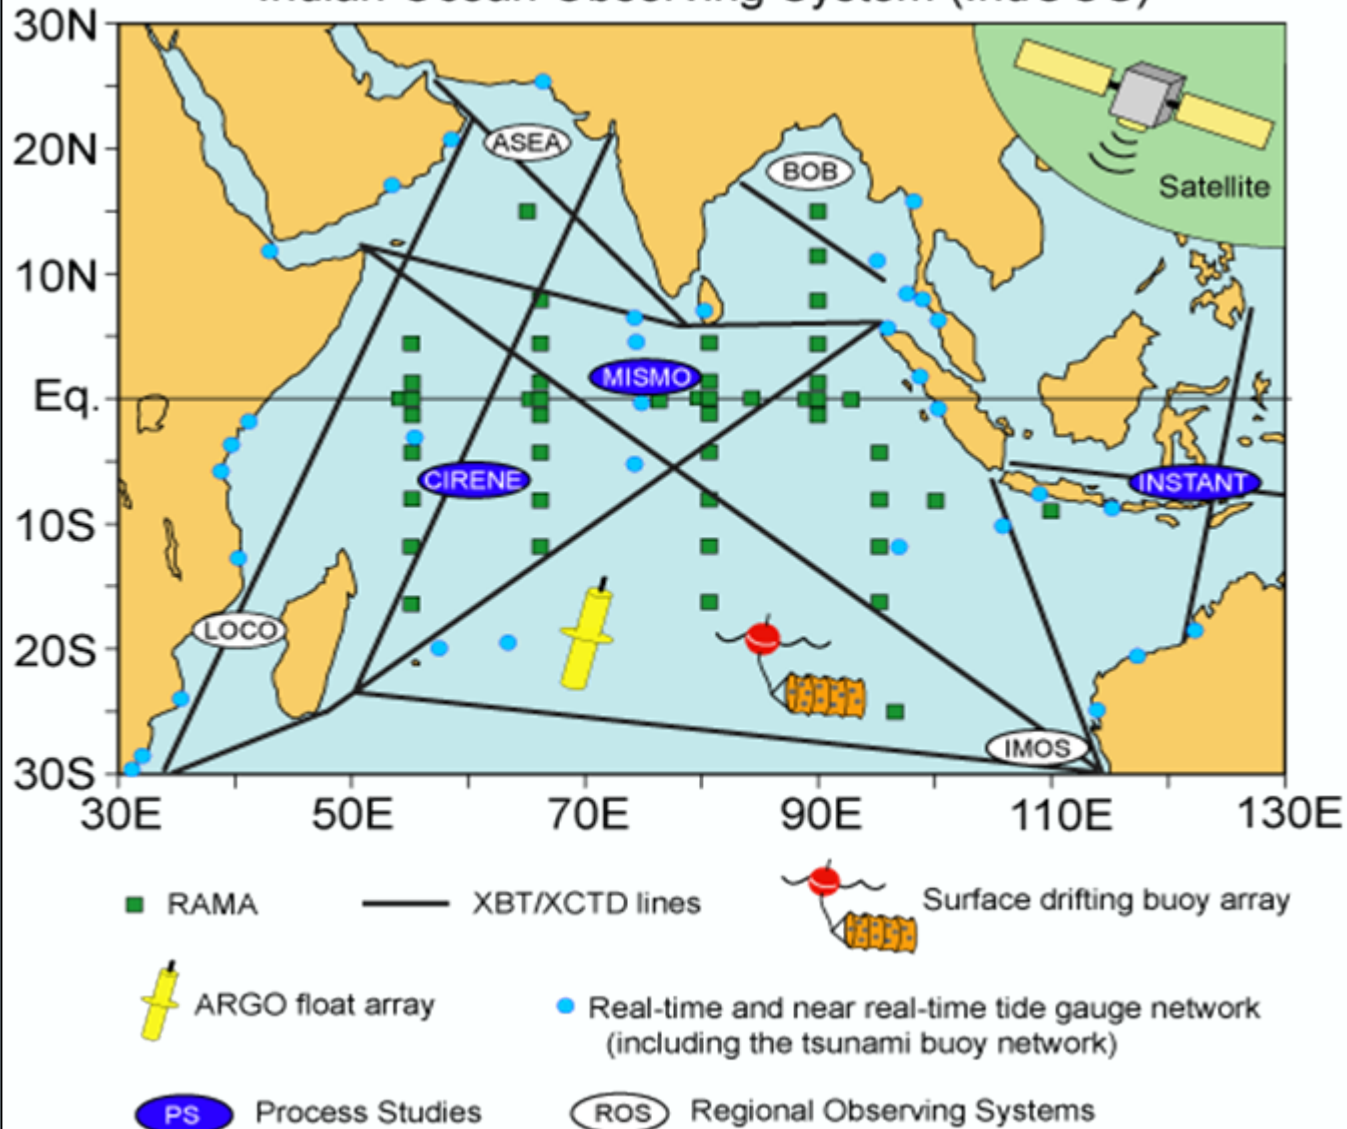

# The "SCTR" and its phenomenology

- Generation region for cyclones
- Strong SST signature to MJO at intraseasonal timescale
- Interannual variability: signature of IOD / ENSO with strong climatic consequences

## Indian Ocean Observing System (IndOOS)

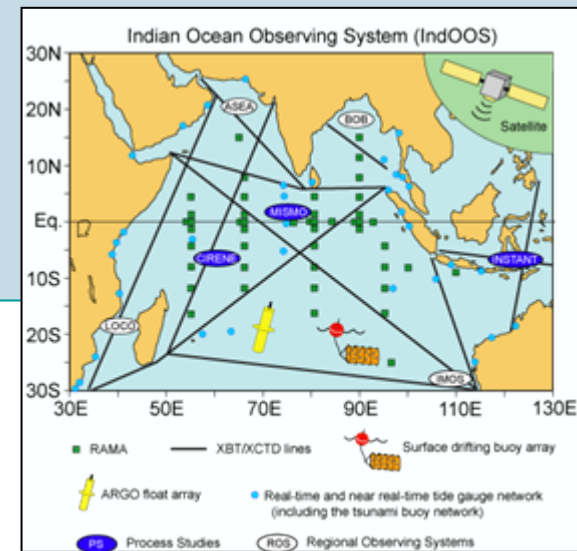

## IndOOS

- Plan developed by the International CLIVAR/GOOS Indian Ocean Panel in 2004
- Basin scale, upper ocean (2000 m) focus.
- Design supported by numerical model observing system simulation studies.

# RAMA

## Research Moored Array for African-Asian-Australian Monsoon Analysis and Prediction (**RAMA**)

**RAMA**

**RAMA: Ancient king of India and hero of the epic "Ramayana".**

**McPhaden et al, 2009: RAMA. Bull. Am. Met. Soc., April issue**

## Surface Moorings

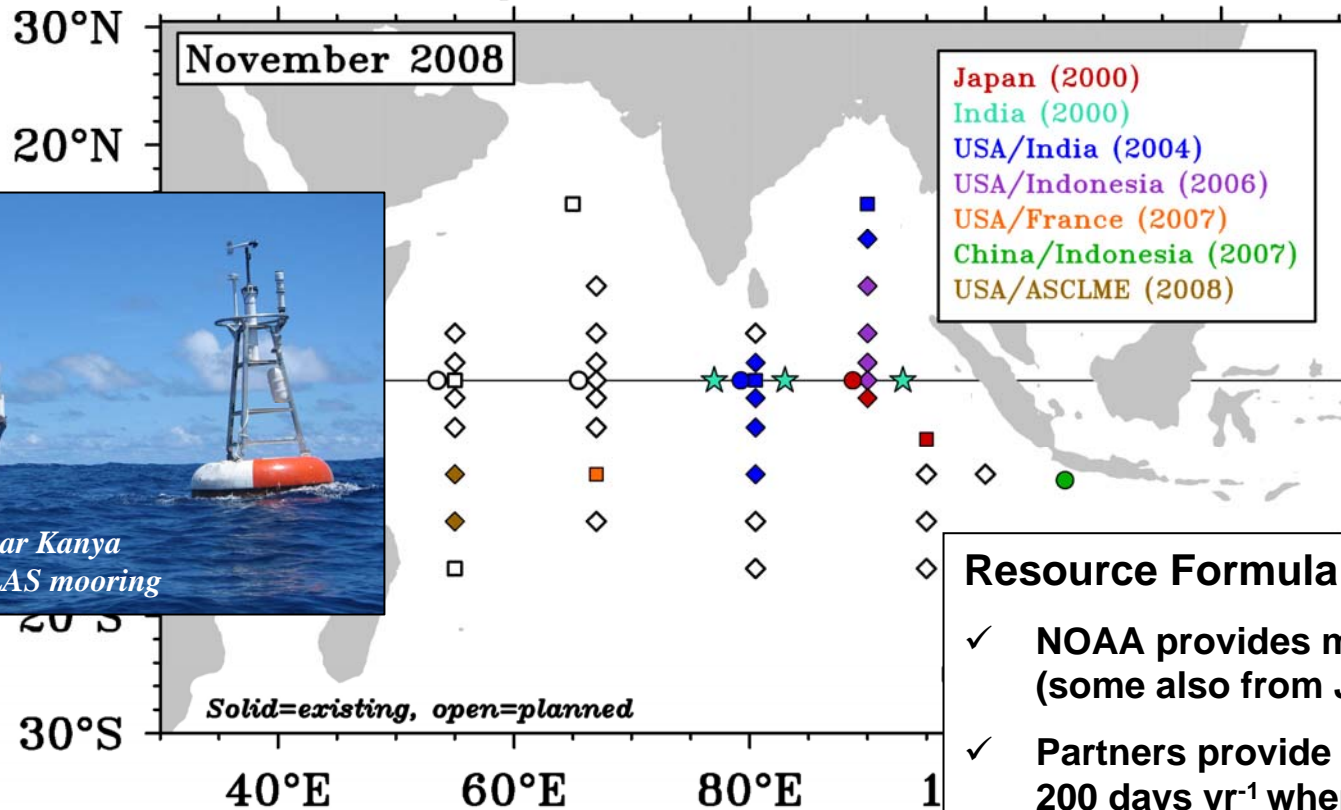

- ✓ Rapid sampling in time to resolve rather than alias high frequencies
- ✓ Multi-variate (ocean, atmosphere, biogeochemical)
- ✓ Fixed grid array so time and space are not mixed
- ✓ Real-time data transmission (Service Argos & Global Telecommunications System)

# RAMA: Present Status

## Research Moored Array for African-Asian-Australian Monsoon Analysis and Prediction (*RAMA*)

◆ Surface Mooring   ■ Flux Reference Site   ● ADCP   ★ Deep Ocean

### Resource Formula:

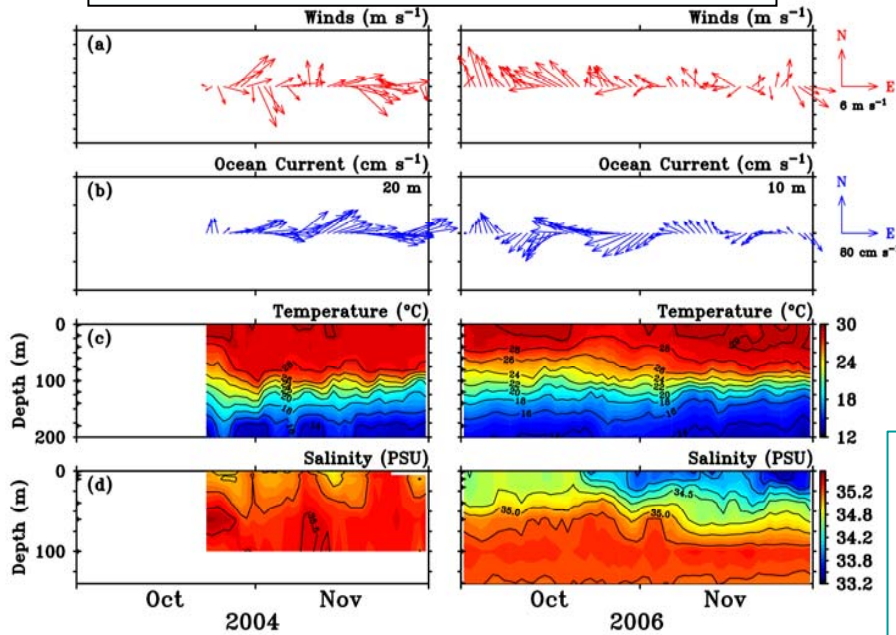

- ✓ NOAA provides most equipment (some also from Japan & India)
- ✓ Partners provide ship time (~150-200 days yr<sup>-1</sup> when complete)

47% of sites occupied at present (22 of 46)

# Scientific Progress

## Indian Ocean Dipole

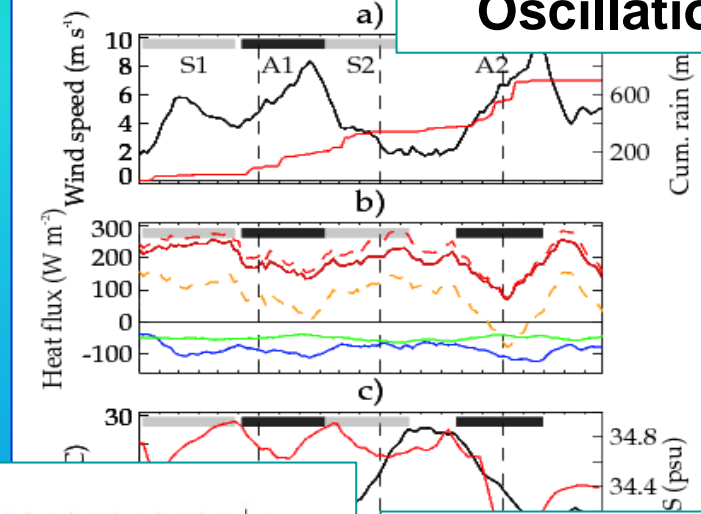

## Ocean Circulation

Nagura & McPhaden, GRL, 2008

Vialard et al, GRL, 2008

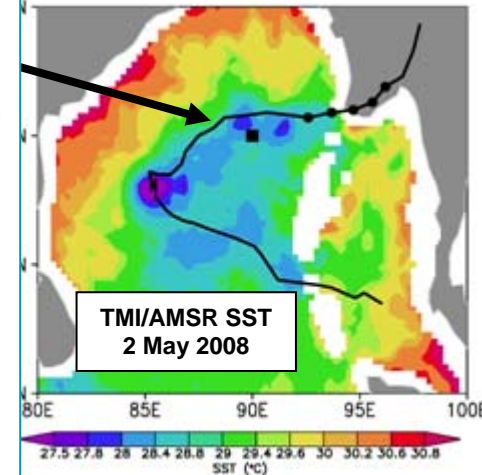

## Madden-Julian Oscillation

## Cyclone Nargis

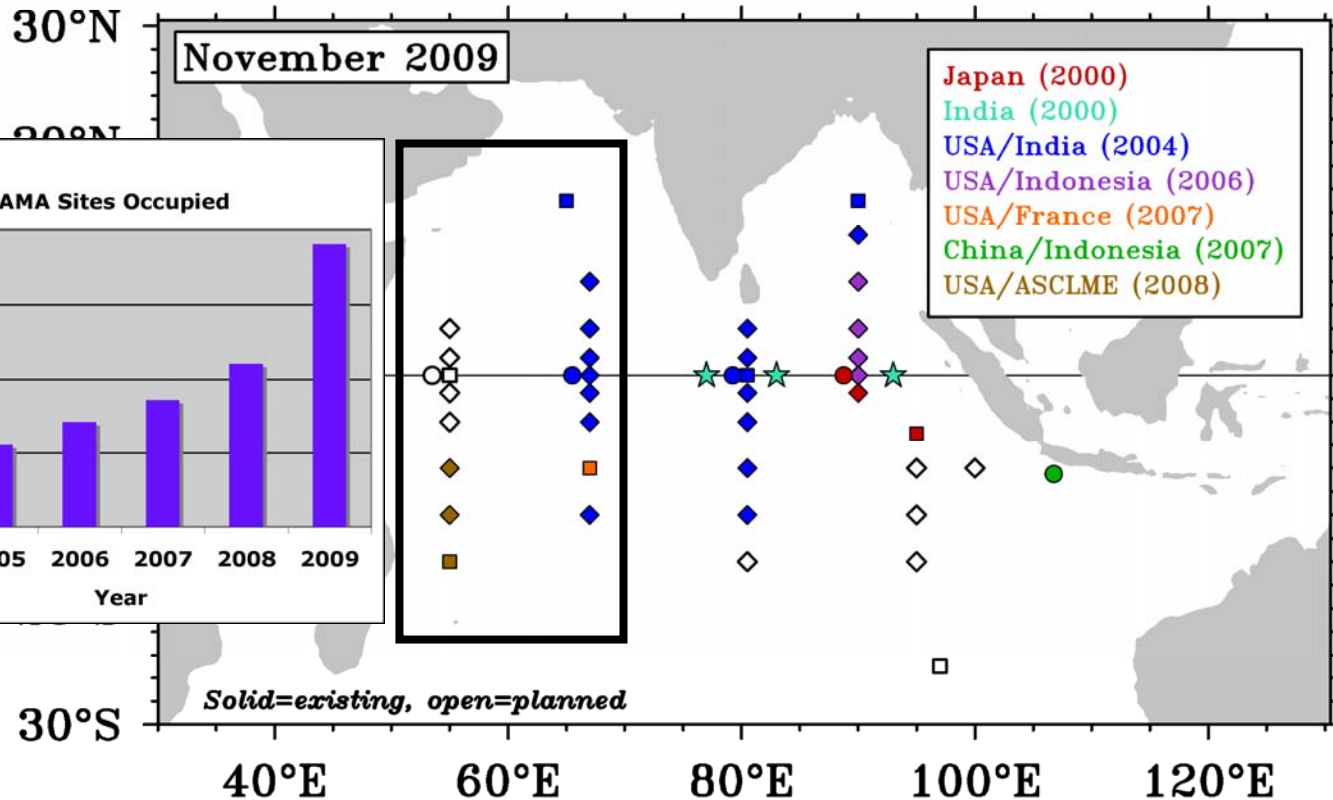

McPhaden et al, EOS, 2009

# RAMA: Plans for 2009

Research Moored Array for African-Asian-Australian  
Monsoon Analysis and Prediction (*RAMA*)

◆ Surface Mooring   ■ Flux Reference Site   ● ADCP   ★ Deep Ocean

83% of sites occupied by November 2009 (38 of 46)

# Summary

- ✓ *IndOOS and RAMA will be ~complete by late 2011*
- ✓ *Valuable contribution for studies of ocean-atmosphere interaction, ocean mixed layer dynamics, ocean circulation*
- ✓ *Real-time data for weather and climate forecasting & analysis*
- ✓ *Large scale, long term oceanographic context for CINDY/DYNAMO*
- ✓ *CINDY/DYNAMO ship support for some basic mooring work*

# International Cooperation

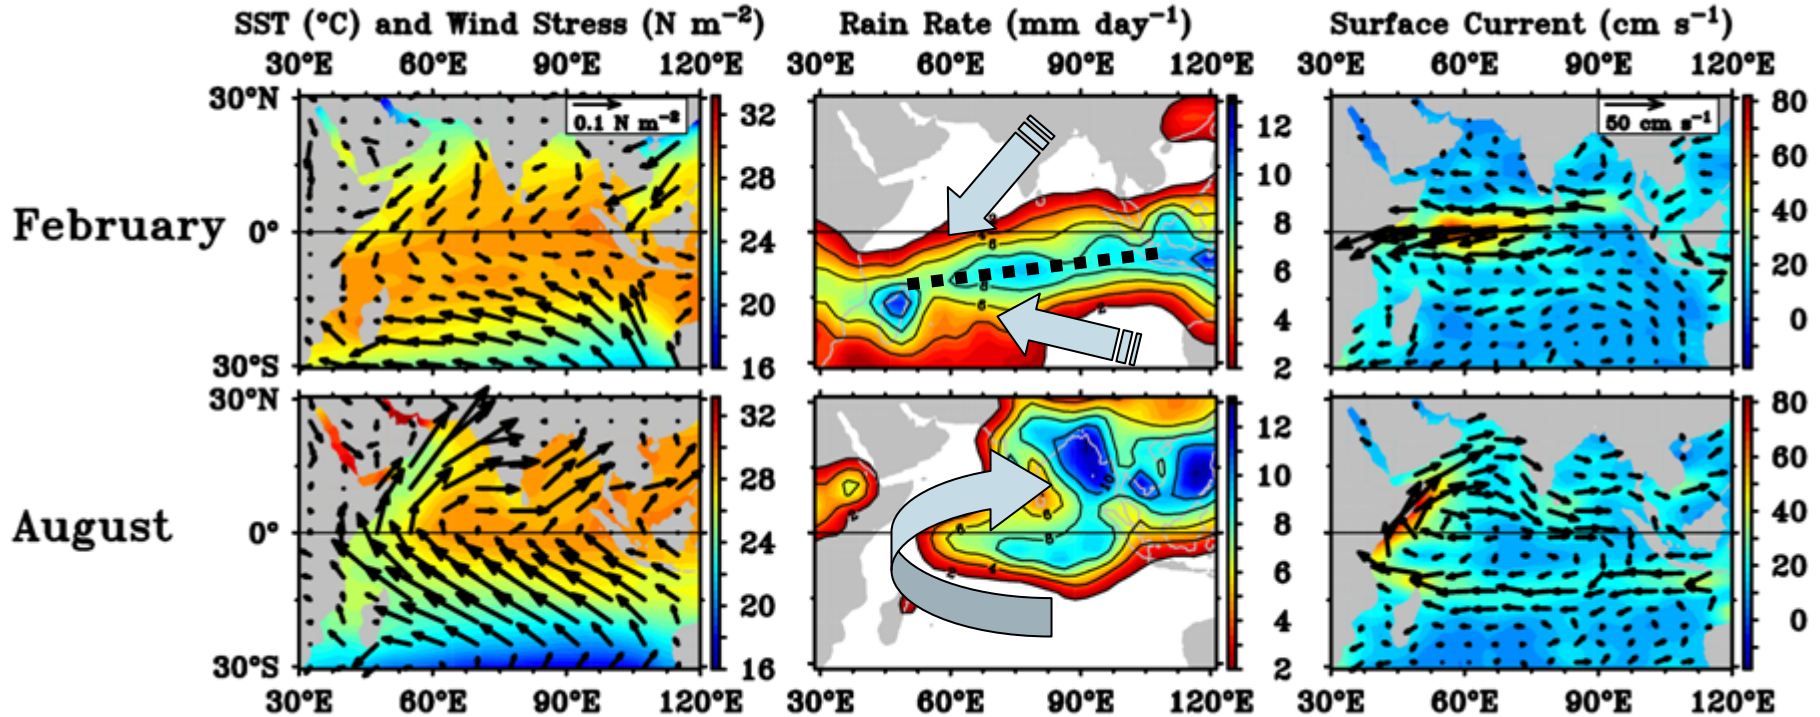

Bilateral agreements between NOAA & agencies:

- Indonesia--signed in 2007
- India--signed in 2008
- Japan--signed in 2008
- ASEAN (South African countries)--planned in 2009

**International IndoOOS Resource Forum**

Materials: Indonesia with a) China; b) Japan

# The Monsoons

One third of the world's population depends on monsoon rainfall
