

S-Pol

- Basic data (Z , V_r , SW)
- Dual-pol
- Rainfall estimates
- Microphysics
- Refractivity
- Dual-wavelength option

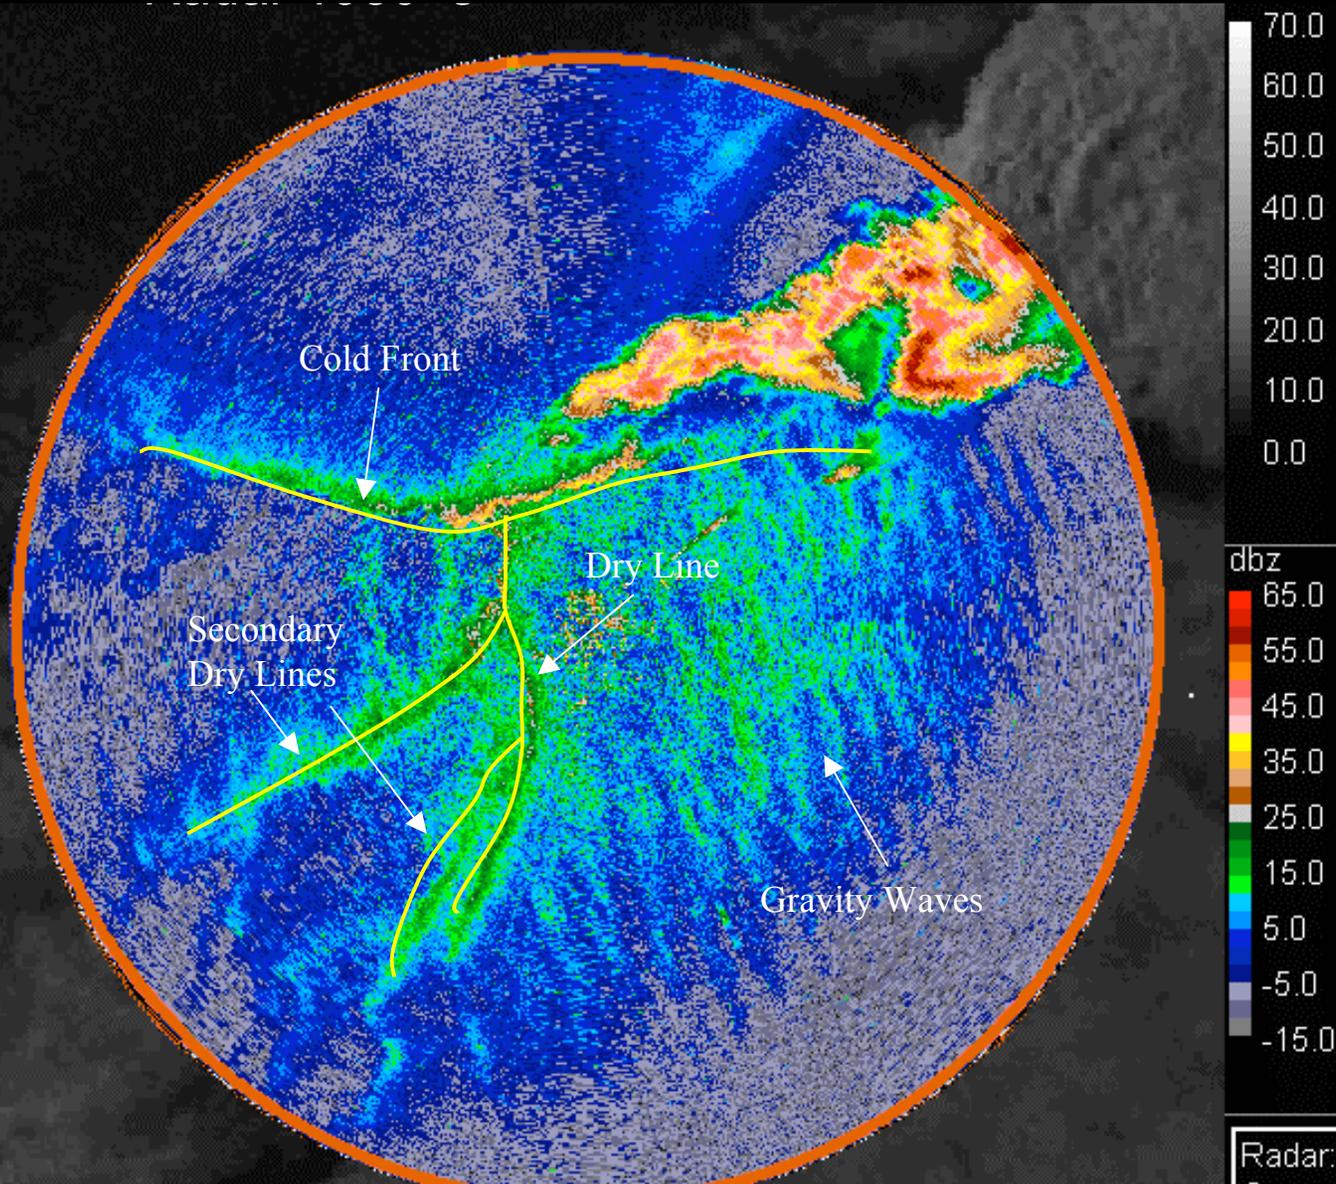

Photo by Scott Ellis

S-Pol Characteristics

- Diesel generator power
- 2.7-2.9 GHz (10 cm)
- 0.3-1.4 microsec pulse width
- Nominal PRF 1000 Hz
- >1 Mw peak transmit power
- MDS at 50 km/1 km is -15 dBZ/-52 dBZ at -6 dB SNR
- 0.91 deg beamwidth
- Scan rate up to 18 deg/sec
- Range gates 37.5-1000 m
- 16-1000 samples

S-Pol Reflectivity

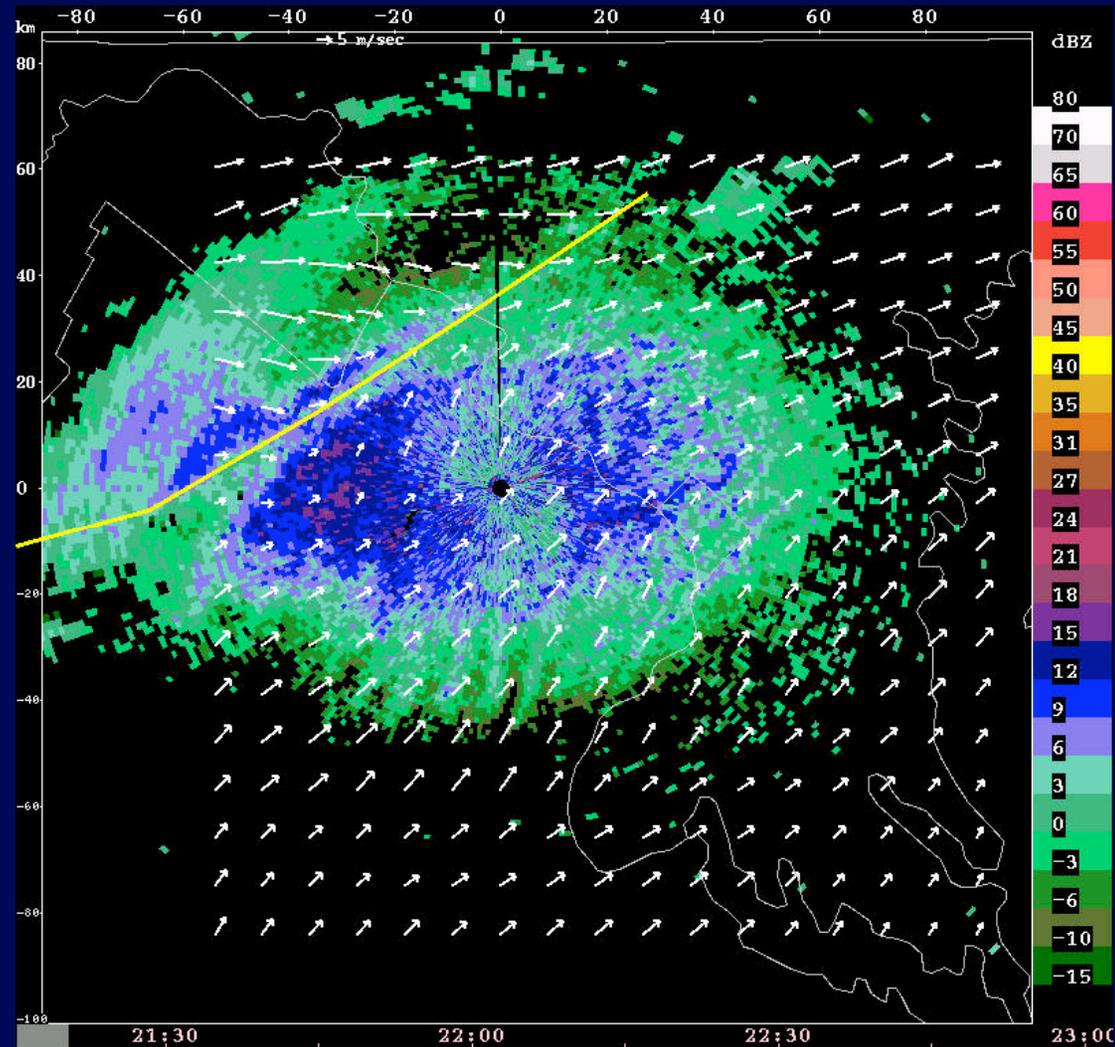

Radial Velocity

- Dual-Doppler within ~60 km of another Doppler radar
- VAD – single Doppler profiles
- VDRAS – Single Doppler wind retrievals

VDRAS 3D Wind Retrieval

S-band
antenna
(10 cm)

K_a-band
antenna
(0.8 cm)

- Detection of cloud droplets
- Estimate of drop size and LWC
- Raindrop size distribution
- Effect of Bragg scatter is less at Ka-band
- Improved cloud microphysical retrieval using both dual-wavelength and dual-polarization observations

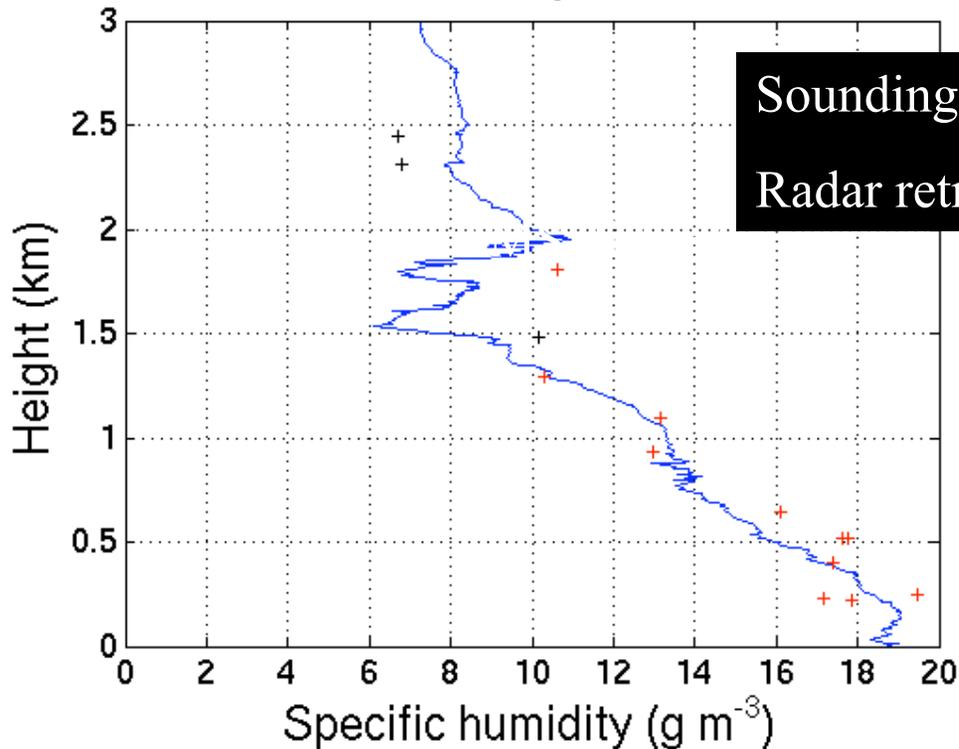

Ka- and S-band reflectivity

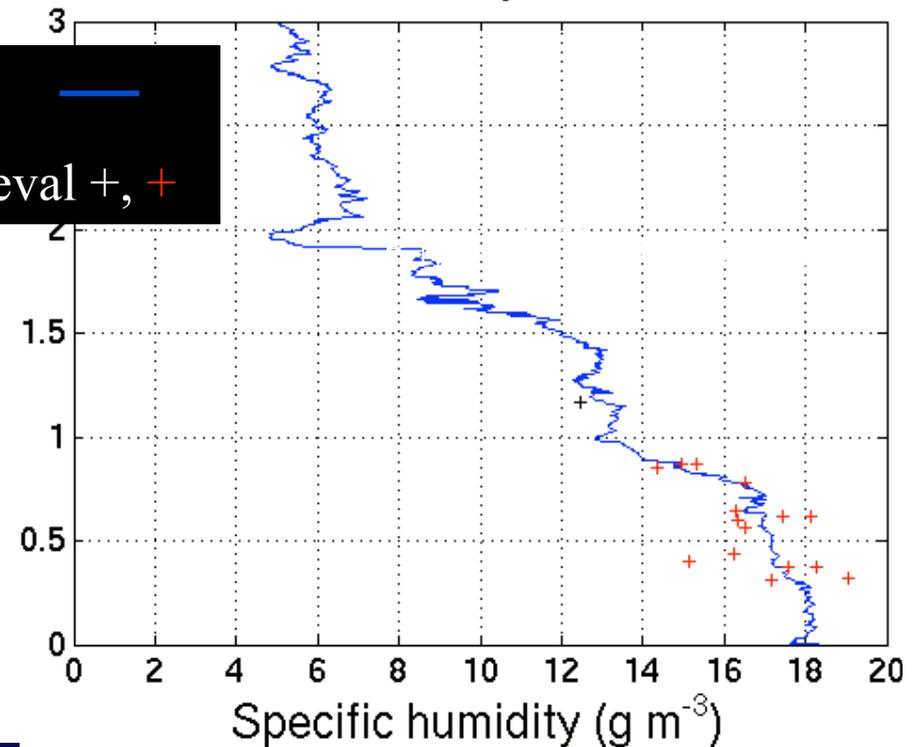

- Ka-band has very little Bragg scatter – Readily identified with dual-wavelength measurements
- Differences in precipitation Z values due to Mie scattering and attenuation at Ka-band

Dual-wavelength (S- and Ka-band) humidity retrieval results
