# TPARC Dropsonde Data Products:

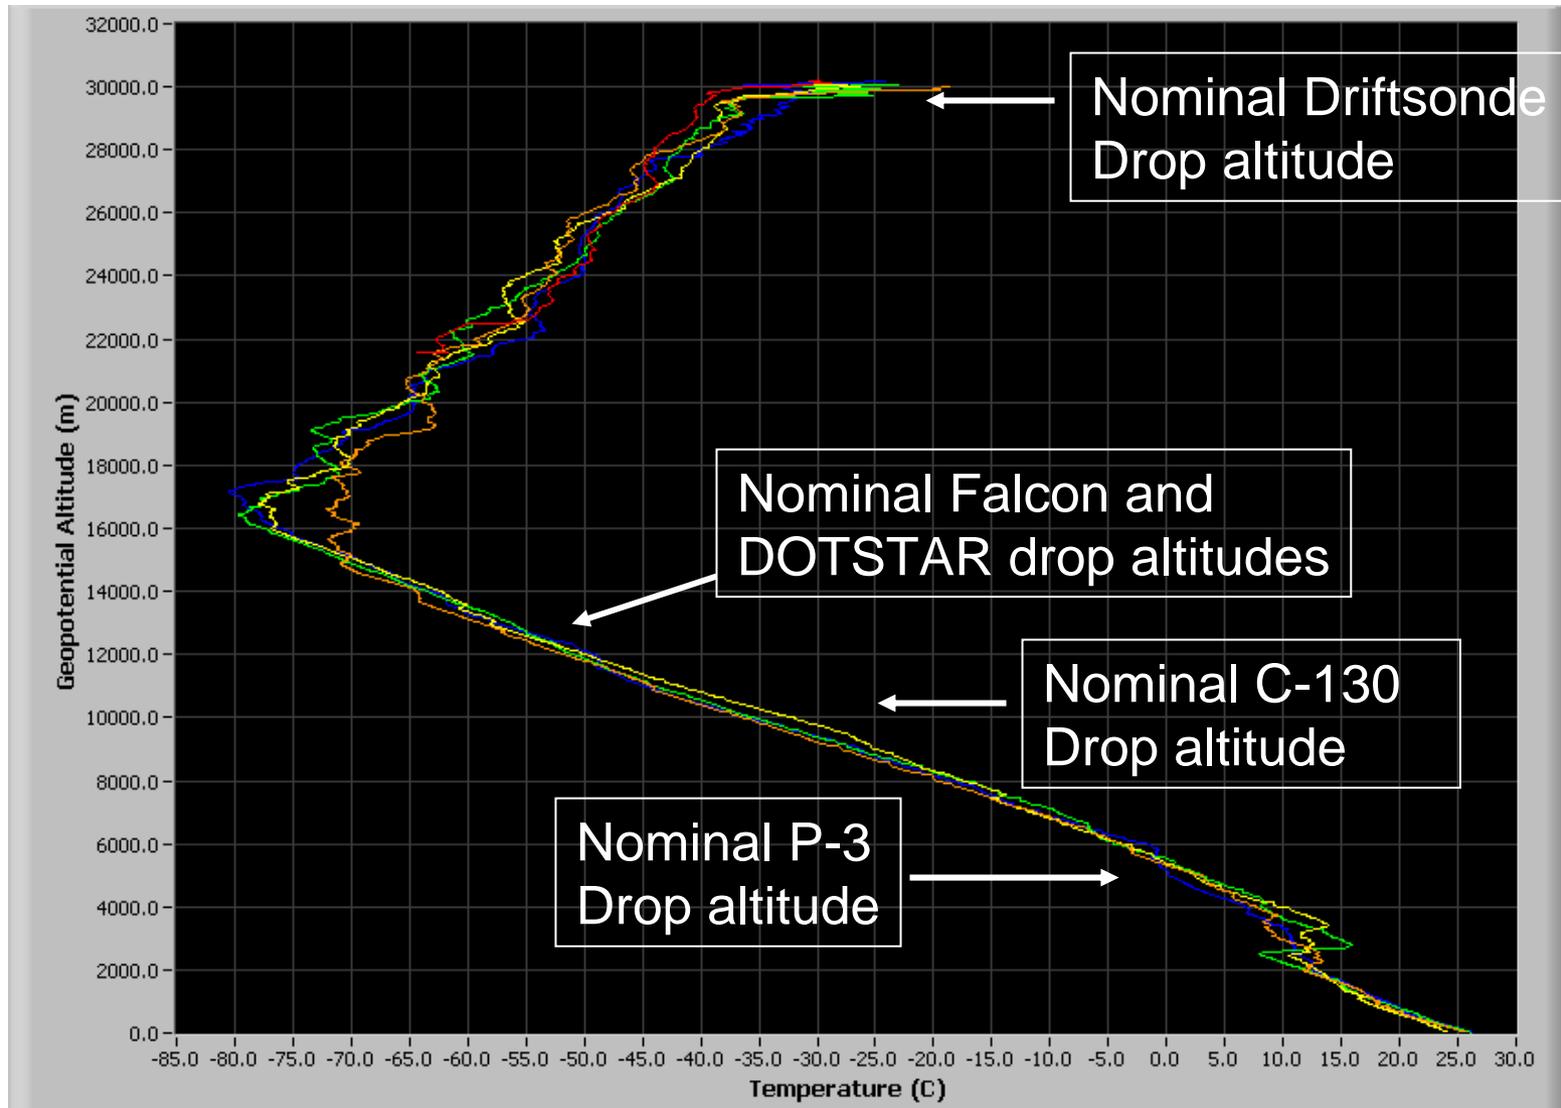

Approximately 1600 dropsonde soundings collected between Aug 1 – Sept 30

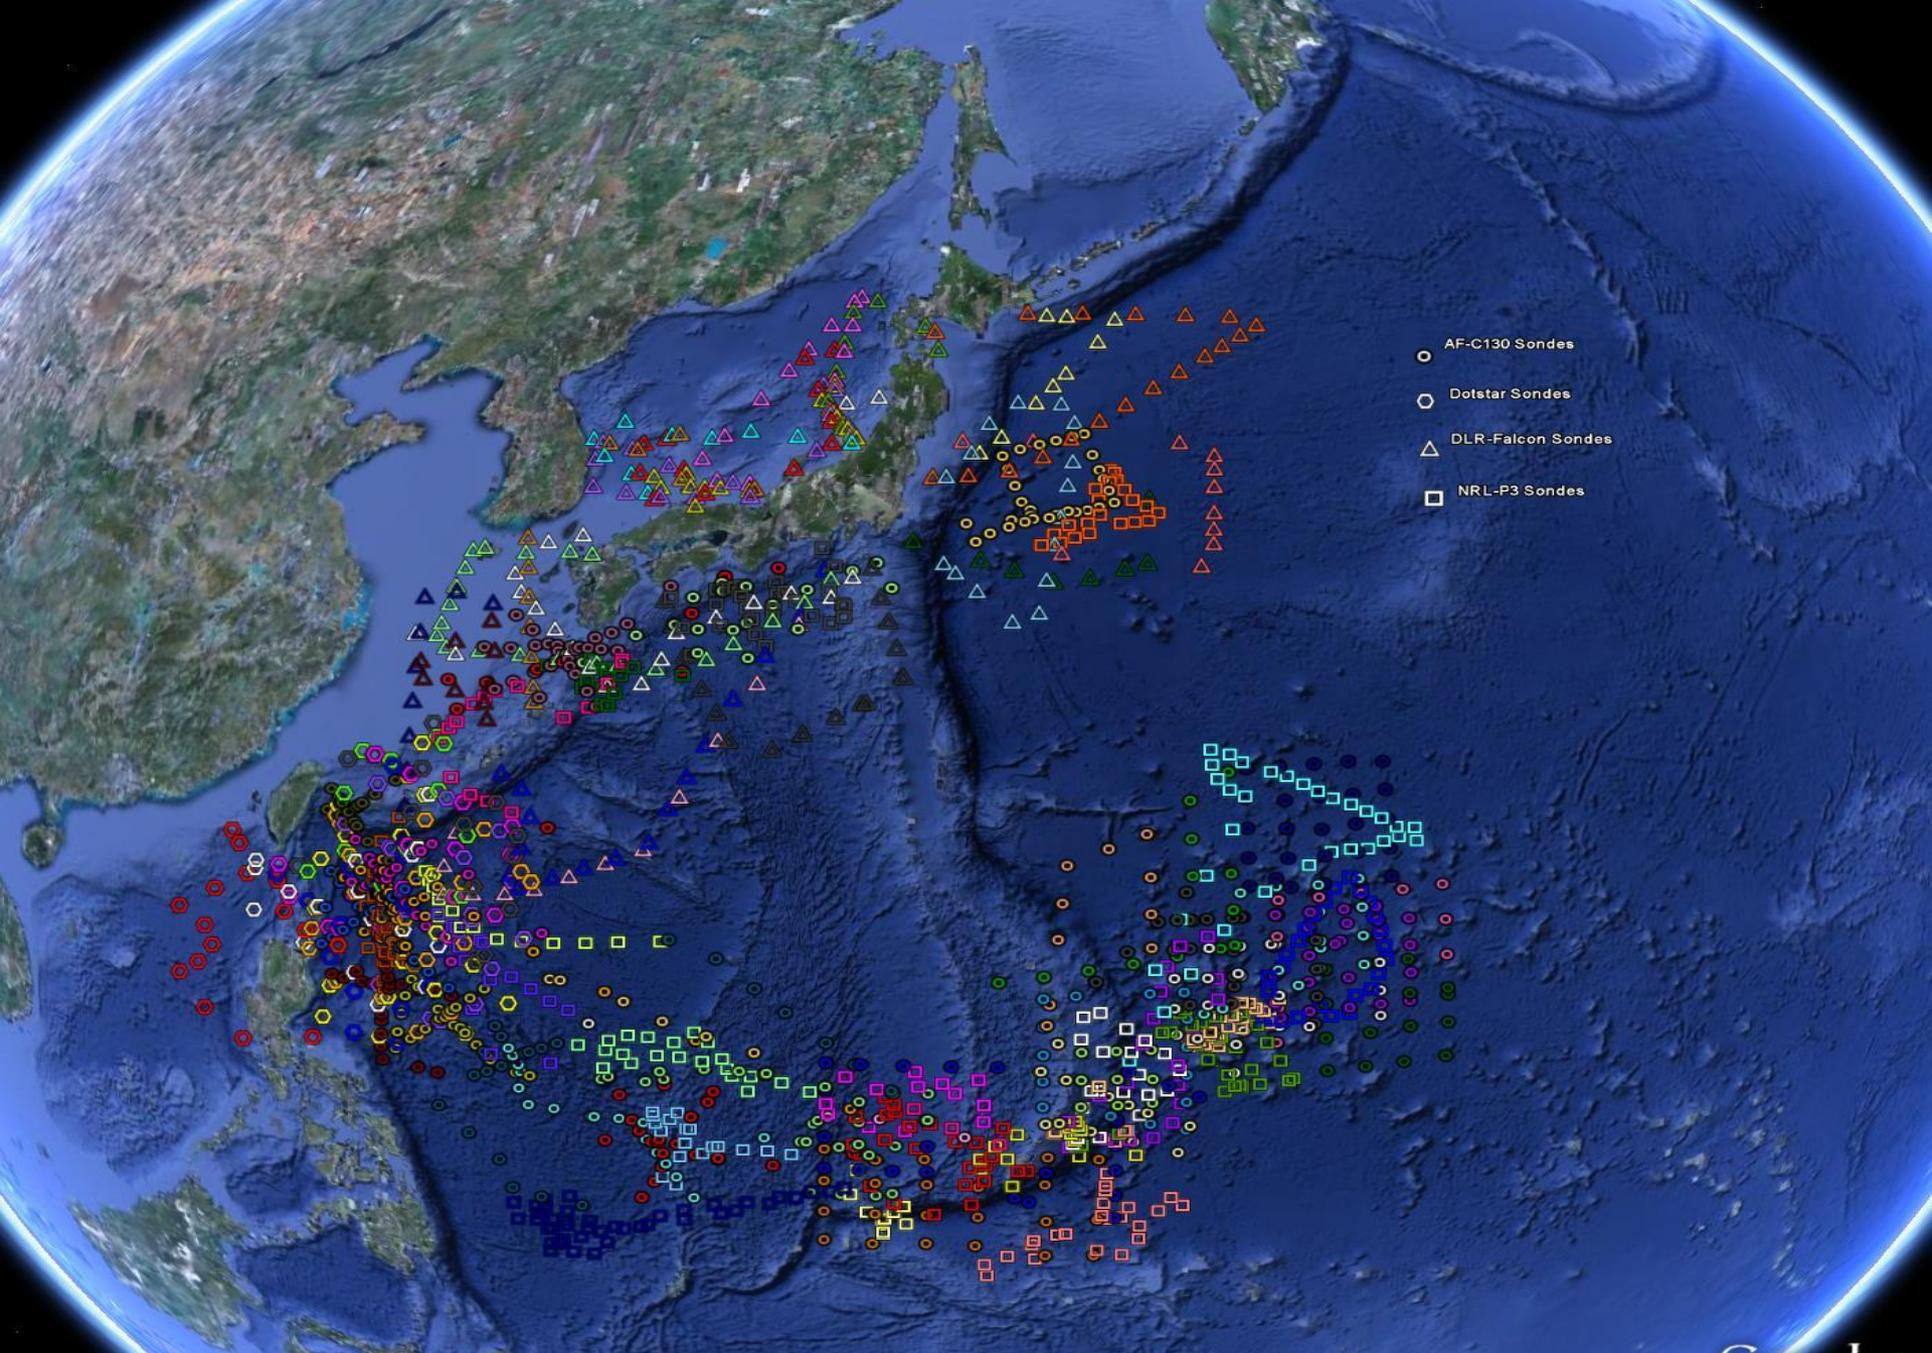

## Aircraft included:

- NRL-P3 = 475 (Released)
- Air Force C130 = 630 (In-progress)
- DLR Falcon = 338
- Taiwanese Astra = 162

# T-PARC (airborne) Sounding Systems

Driftsonde Temperature versus Altitude (4 drops) from 30km!

- AF-C130 Sondes
- ◉ Dotstar Sondes
- △ DLR-Falcon Sondes
- ◻ NRL-P3 Sondes

# Quality Control of P3 Dropsonde data

# Configuration Error Files

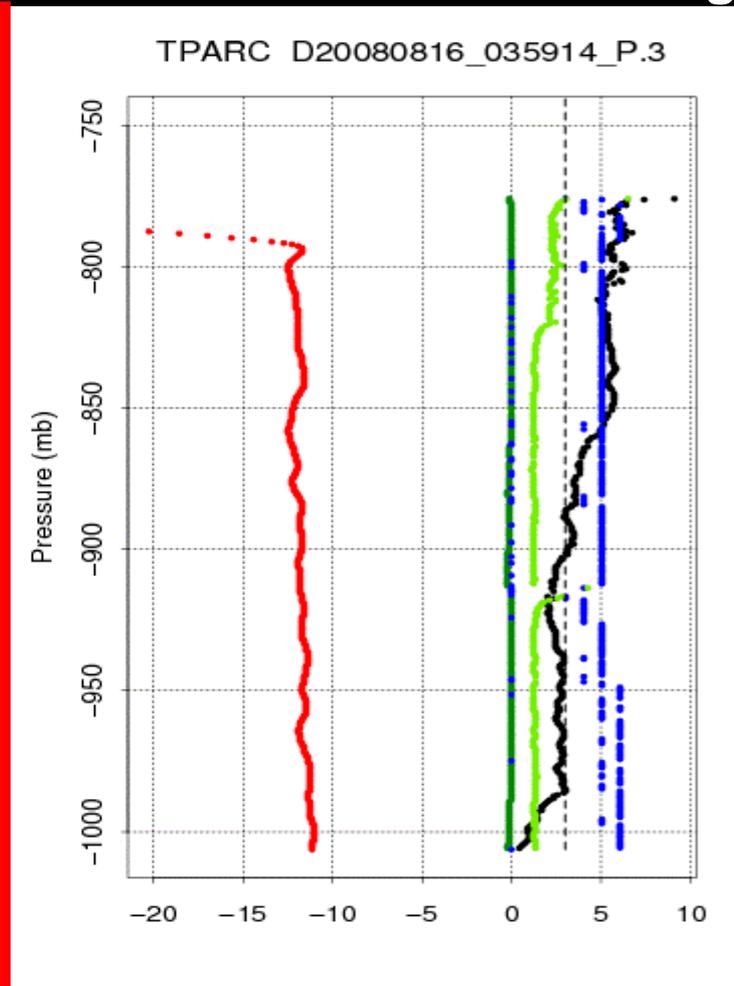

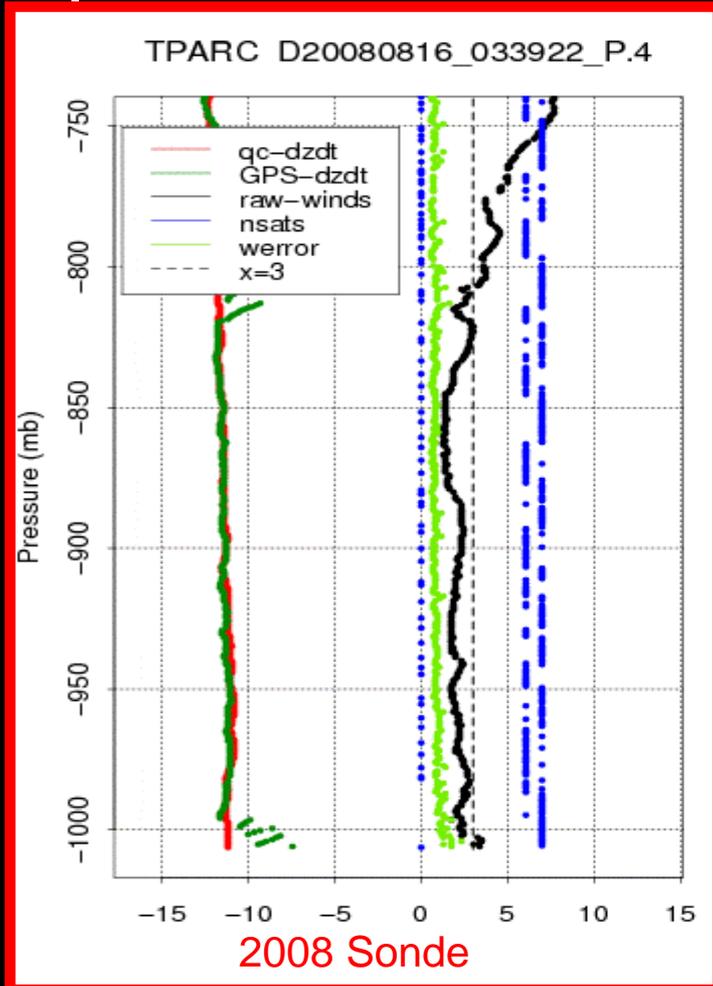

- Identify sondes manufactured in 2008
- Create profiles of GPS measured  $dz/dt$  and ASPEN calculated  $dz/dt$
- Separated them into “good agreement” and “not so good”

Configuration Error  
Dropsondes with Good  
Agreement between  
Measured and Calculated  
 $DZ/DT$

**For those with good agreement....**

**Did comparisons between sondes launched from the same flight.**

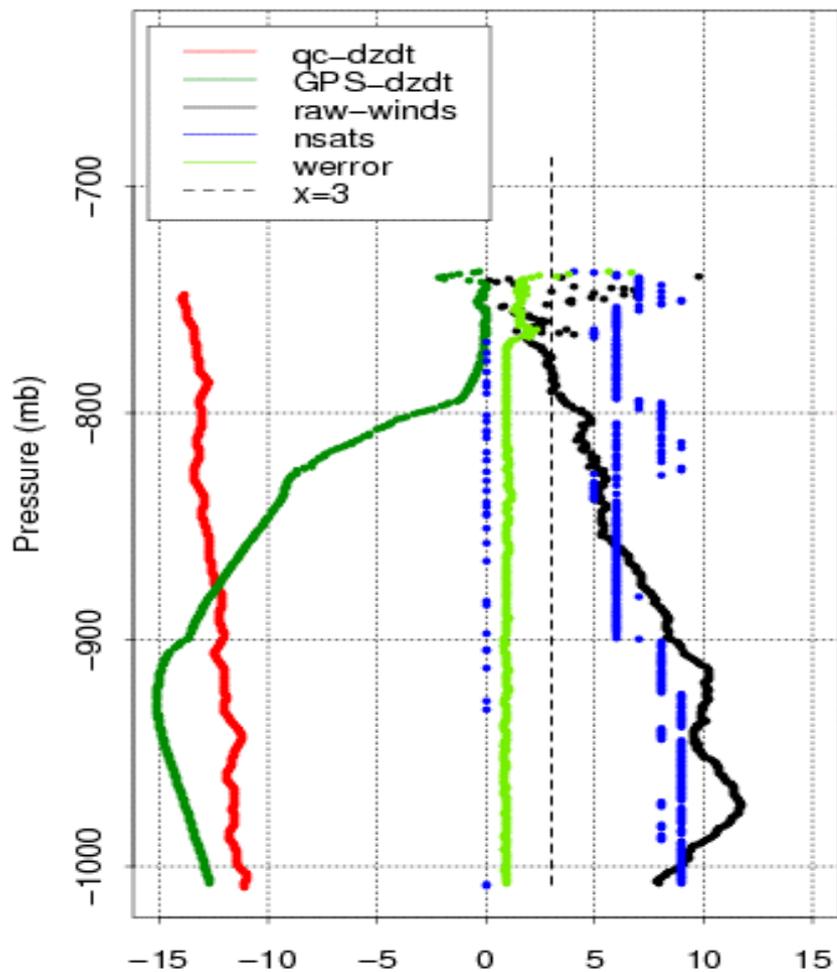

**Based on these comparisons, we determined the winds to be ok.**

Configuration Error  
Dropsondes with Poor  
Agreement between  
Measured and Calculated  
 $DZ/DT$

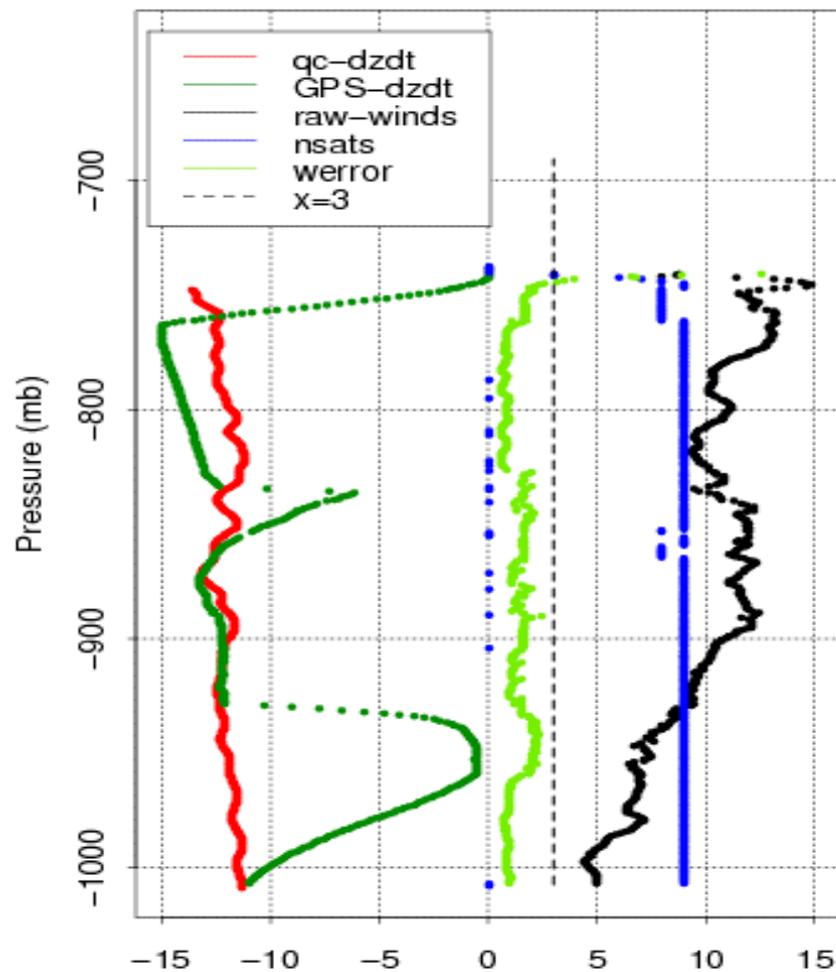

# Category #1

Characterized by suspicious GPS dz/dt, but reasonable wind speed when wind errors are low and sats  $\geq 5$ .

TPARC D20080901\_205846\_P.2

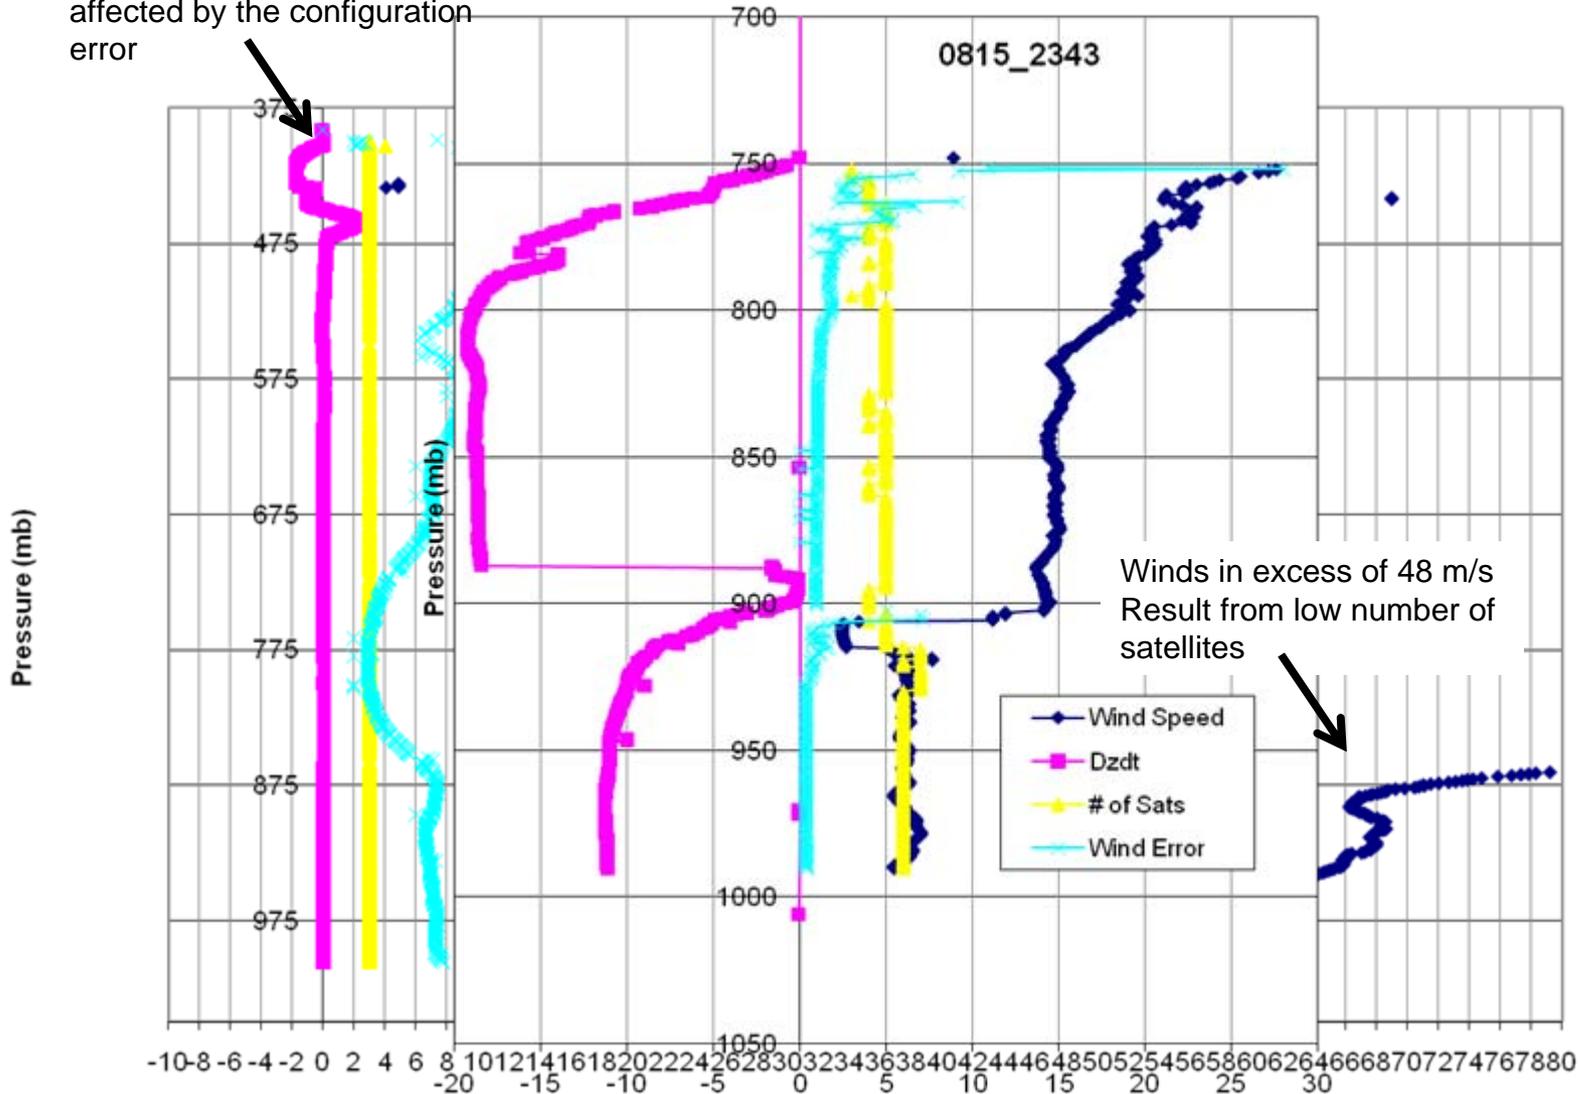

TPARC D20080901\_213511\_P.2

# Category #2

## Errors with dz/dt, suspicious winds

GPS DZ/DT is affected by the configuration error

# Solution to Address Soundings with a Configuration Error

Additional evaluation included:

- Examination of GPS Altitude
- Comparison between calculated position and position integrated from winds
- Both of which showed questionable results as well.

**Final decision was made to remove all GPS data (wind spd, direction, lat, lon and GPS alt) from data files where calculated and measured  $dz/dt$  did not agree well.**

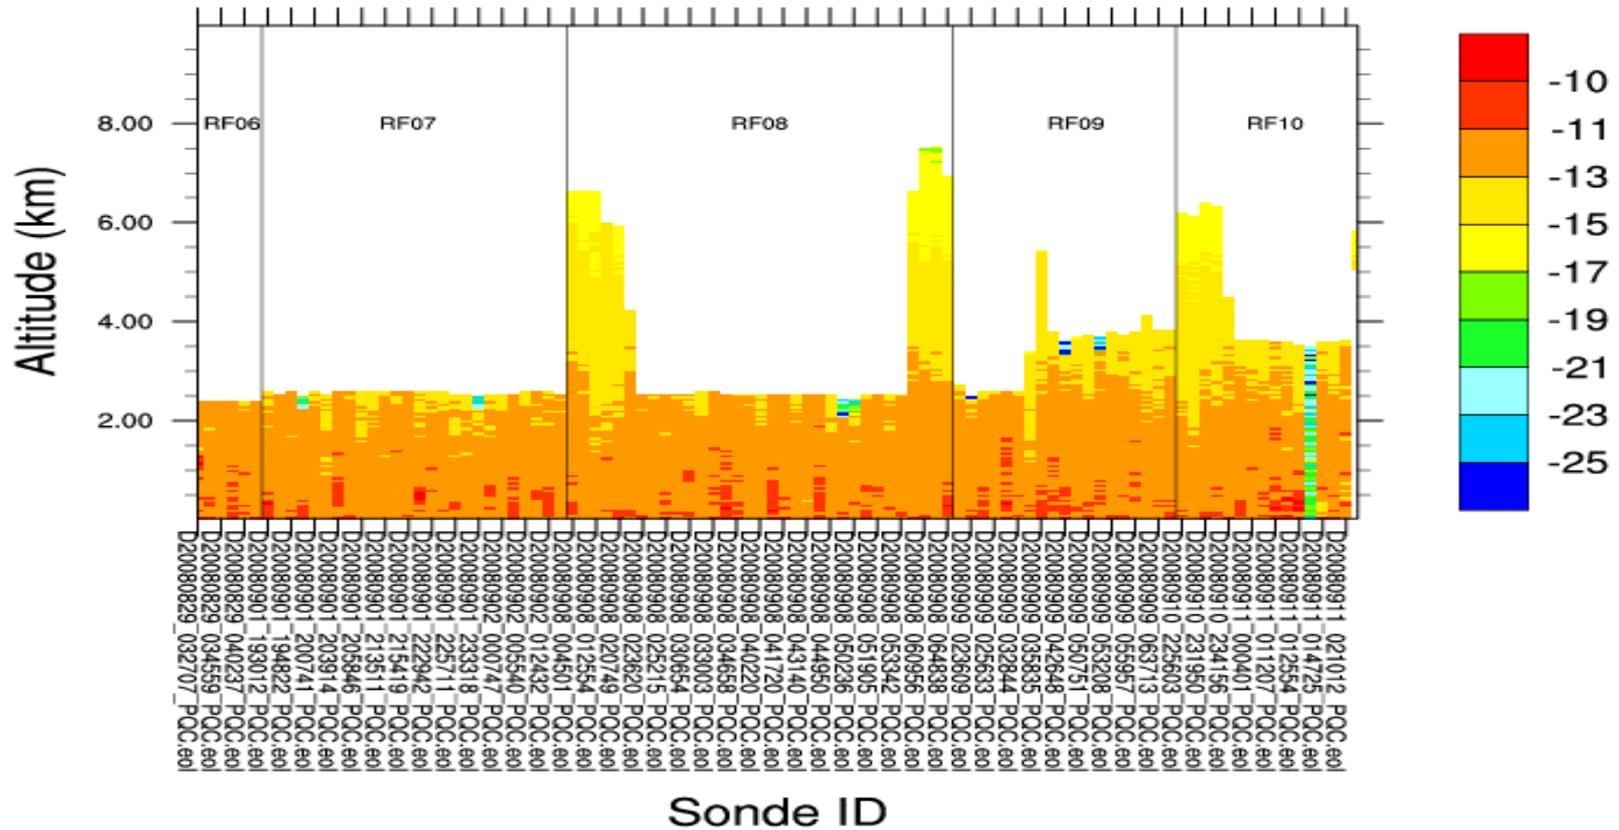

# “Configuration Error” Dropsonde Statistics

- 484 dropsondes used
- 100 had configuration set to ground based mode (20.6%) (before 9/11/08)
- Of those 100 evaluated:
  - 47 appear to be ok (agreement between GPS vs calc dz/dt)
  - 22 had no GPS data
  - 31 were evaluated for large differences between GPS measured and ASPEN calculated dz/dt , and GPS were ultimately set to missing (6.4% of total)

Delayed Launch Detect

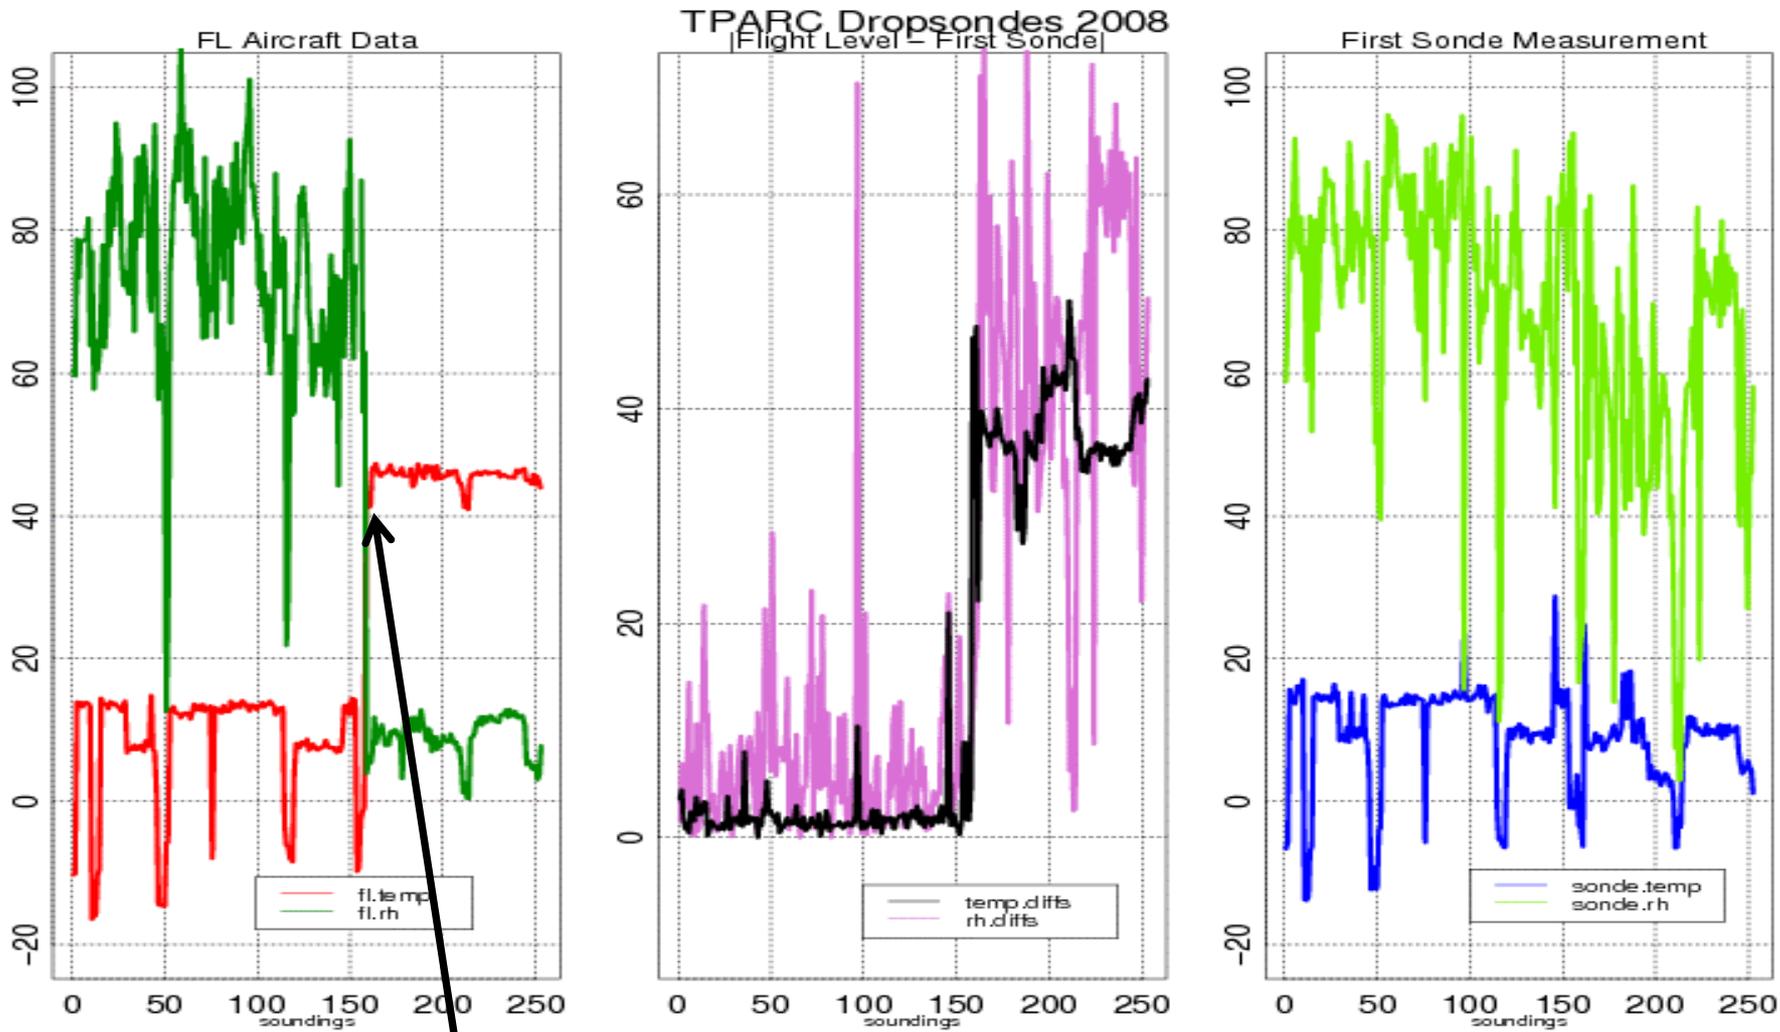

# Delayed Launch Detect

## TPARC P3 Dropsonde (101-200) - DZ/DT

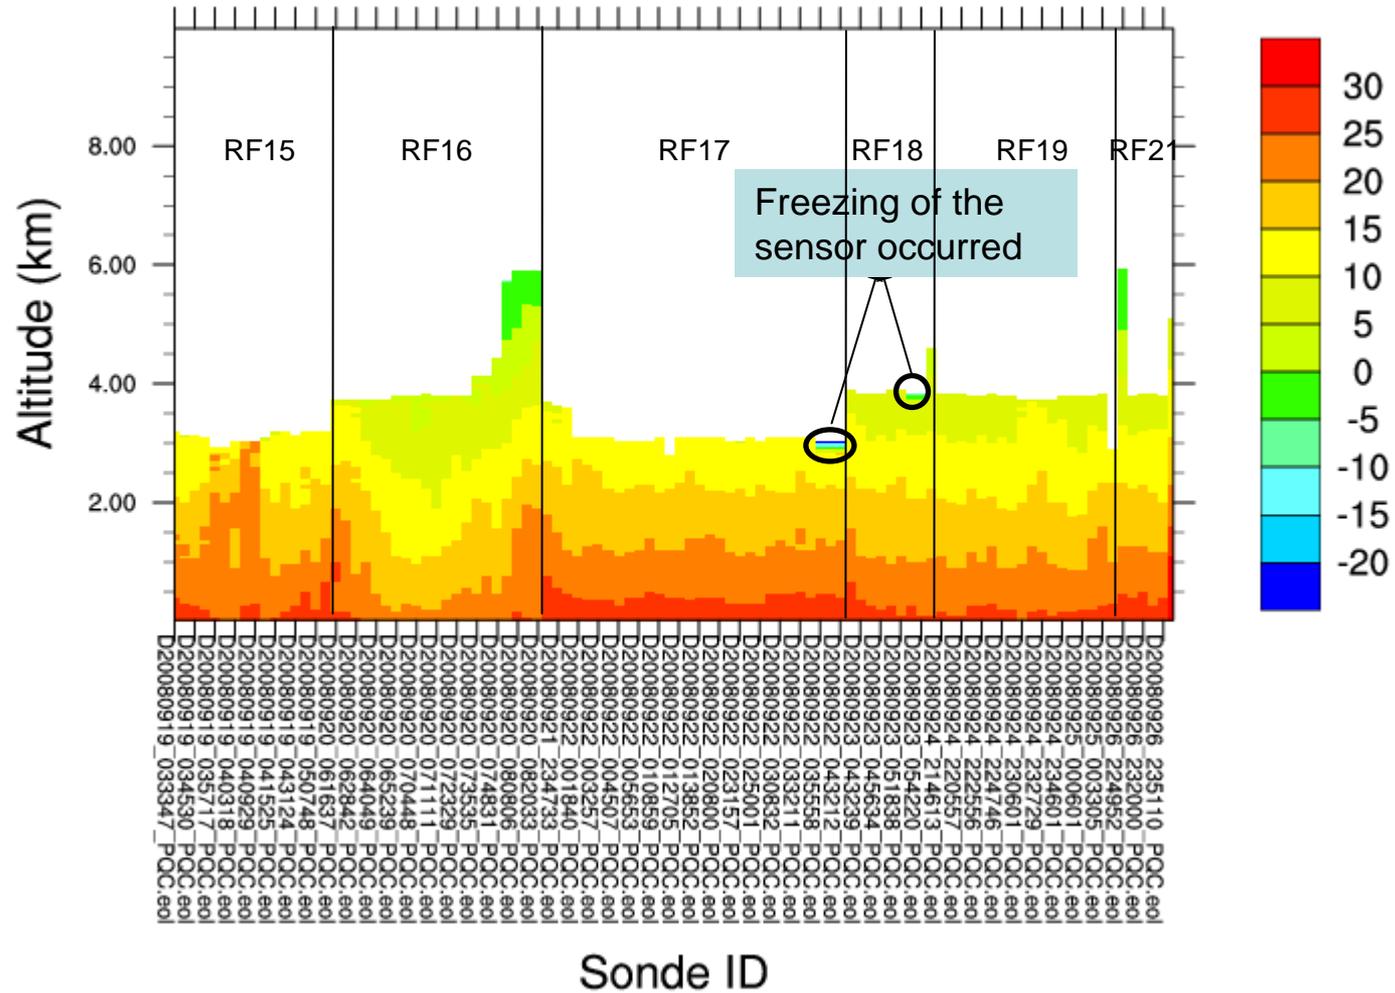

# Aircraft Data Errors

# Failure of Aircraft T/RH sensors

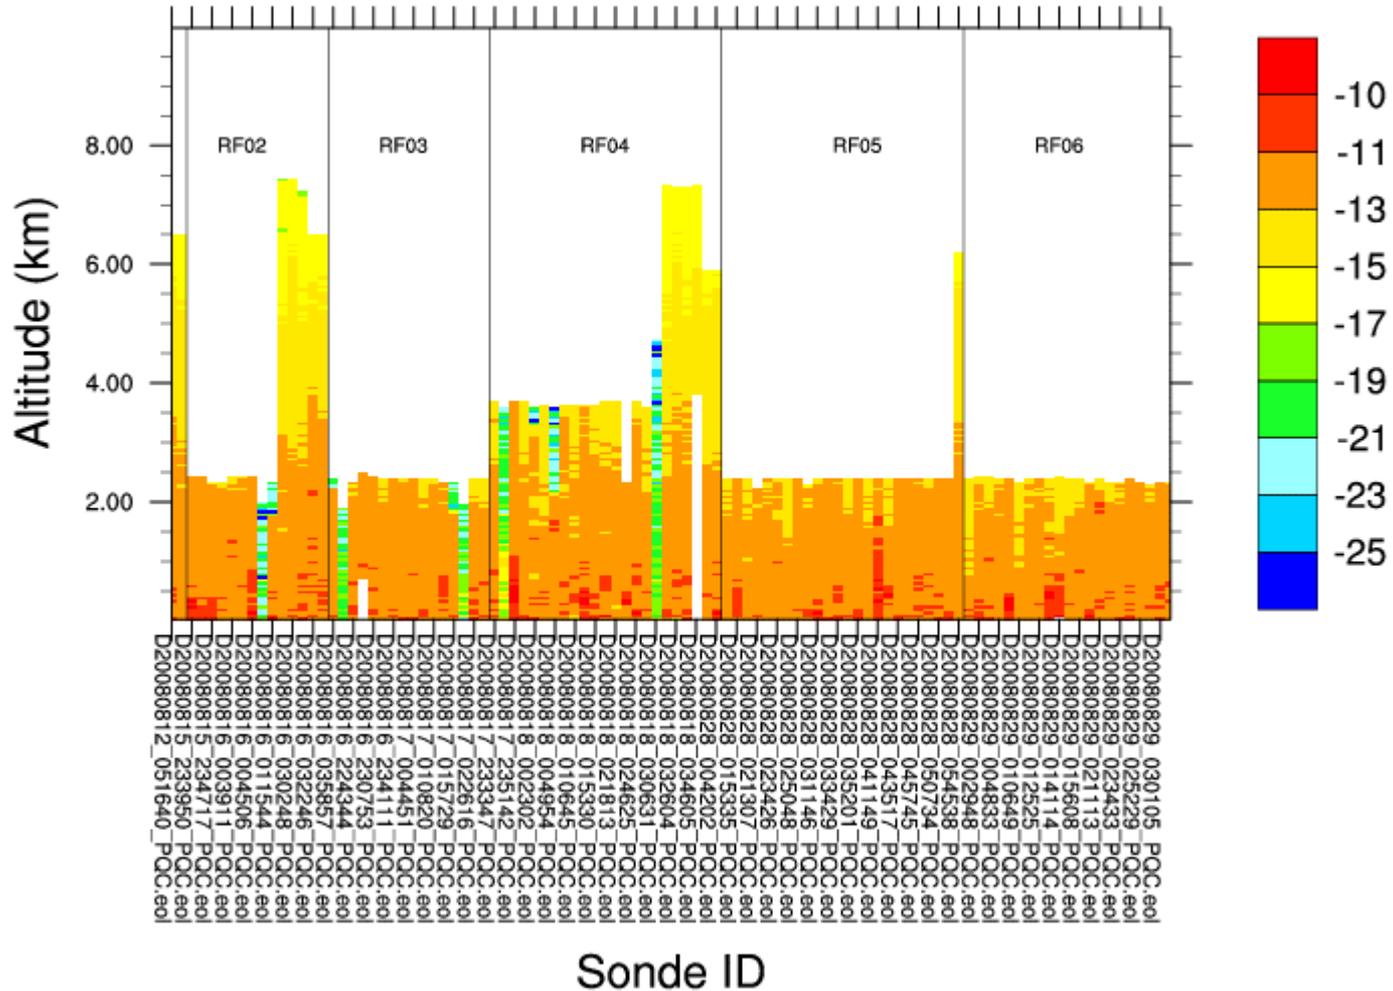

T sensor broke during ferry flight on 09/17

# TPARC P3 Dropsonde (301-400) - Temperature

# Increased frequency of Fast Fall Drops

TPARC P3 Dropsonde (1-100) - DZ/DT

# NRL P-3 DROPSONDE STATISTICS

- ⦿ 20 delay of the launch detect (corrected)
- ⦿ 6 failure of launch detect (corrected)
- ⦿ 7 fast falls (removed winds)
- ⦿ 6 didn't transmit to surface (corrected)
- ⦿ 11 soundings interrupted by other sondes on same frequency. (corrected)
- ⦿ 110 contained bad aircraft data (corrected)

# Highlights & Conclusions

## TPARC P3 Dropsonde (1-475) - Temperature
