

# NRC Convair 580 Operations during WINTRE-MIX

Cuong Nguyen, Leonid Nichman, Kenny Bala, Natalia Bliankinshtein, Keyvan  
Ranjibar, Mengistu Wolde

WINTRE-MIX Workshop – 13-Dec-2021

# Outline

- **Instrumentation**
  - Capabilities
  - Status & Plan
- **Real-time data communication**
- **Flight Planning/timeline**

# NRC Convair-580 Research Aircraft

Extensive in-situ and remote sensing capabilities for measurements of atmospheric state, compositions (aerosol, cloud and precipitation – type, size, phase and bulk properties).

- Crew: 2 pilots + 10 project personnel
- Endurance: 4 – 5 hours
- Range: ~1000 km
- Vertical ceiling: 23,000 ft (7000 m)
- Research payload: 2000 kg
- Min speed 150 knots
- Jointly instrumented by NRC Canada and Environment and Climate Change Canada

# NRC Convair-580 during WINTRE-MIX- Sensors and tools

| Parameters                                 | Sensors  |
|--|--|
| Aircraft state                             | Inertial Navigation Systems (4), and GPS (2)   |
| Atmospheric state                          | Rosemount Temperature Sensors (4), Licors (2) – Dew point, Chilled Mirror, Multiple pressure transducers including 3 5-hole probes |
| Aerosol (size and concentrations)          | <b>UHSAS, SP2, CCN Counter, CPC</b>  |
| Bulk microphysical measurements (IWC, LWC) | <b>Nevzorov</b> , SAE Icing Detector   |
| Icing                                      | Goodrich Icing Detector (2)  |
| Cloud Particles (Size and concentrations)  | FCDP, <b>CDP</b>   |

| Parameters                   | Sensors  |
|------------------------------|--|
| Cloud Imaging Probes         | <b>2D-S</b> CIP, 2D-C, Particle-I, CPI   |
| Precipitation Imaging Probes | <b>PIP</b> , HVPS-3  |
| Radars                       | NRC Airborne W and X (NA <b>WX</b> ) radar, Pilot X-band Radar   |
| Lidar                        | 355 nm - Zenith  |
| Communication                | <b>PLANET – Ground – Aircraft data exchange and flight coordination</b><br><b>In-flight – QP Monitor</b><br>Satellite phone option |

**Extensive in-situ and remote sensing systems**

**Communication: Intercom system for crew and ground-aircraft data exchange tool (PLANET)**

**Backup ground-aircraft communication – Satellite phone**

# Instrumentation status and plan

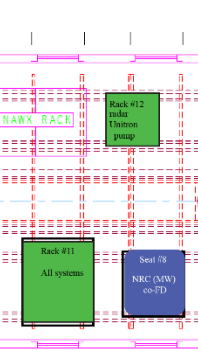

|          | 1                                      | 2 | 3 | 4   | 5 | 6   | 7 | 8 | 9 | 10                             | 11                   | 12                            | 13                         | 14              | 15                | 16         | 17                          | 18                   | 19     | 20                   | 21                        | 22  | 23 | 24                | 25             | 26 | 27 | 28 | 29 | 30 | 31 |  |  |

| March    |  |   |   |   |   |   |   |   |   |                                |                      |                               |                            |                 |                   |            | WINTER-MIX Ends             |                      |        |                      |                           |   |    |                   |                |    |    |    |    |    |    |  |  |

All core sensors are installed and shakedown flight planned for this week (Wed/Thursday)  
 Jan: Aerosol sensors and CVI – Up to four flights (AW, calibration and shakedown flights)

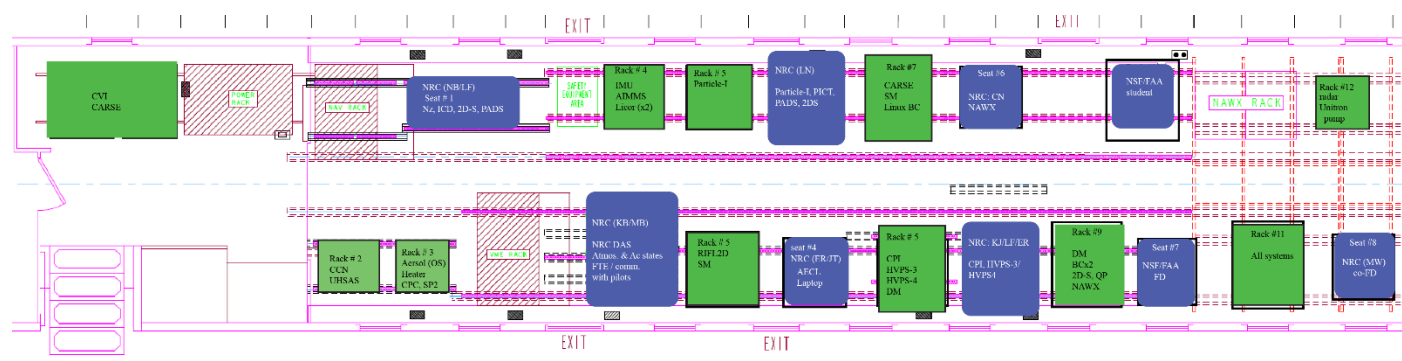

# Crew

## All stations except the

d engineers

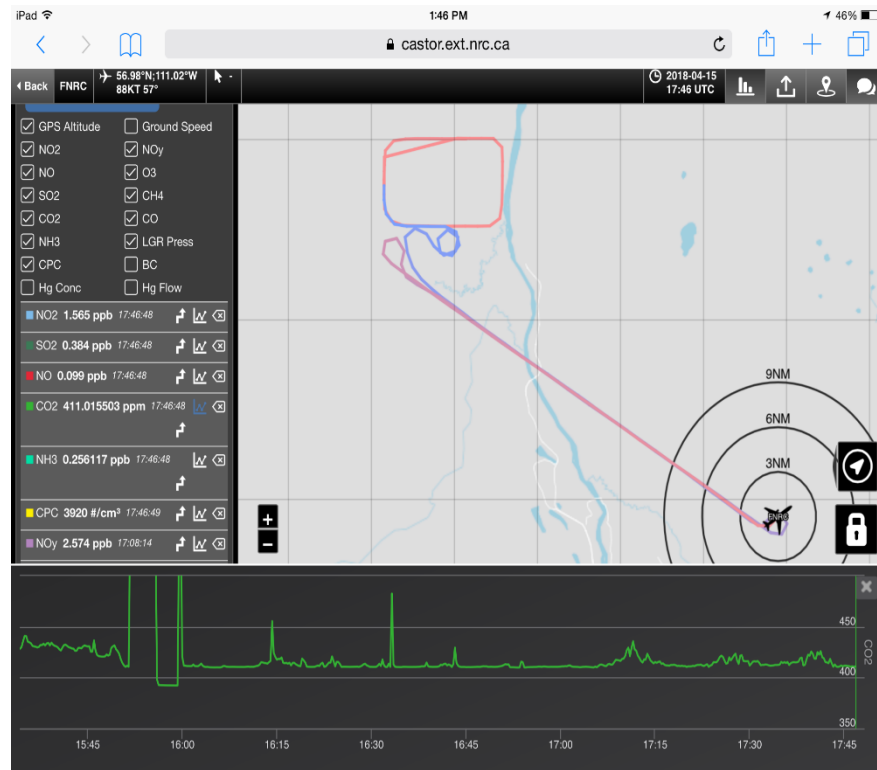

AWX, time series plots  
s, bulk and other  
PLANET – chat and data

## Flight crew:

- **2 pilots**
- **9 seats + 1 jump seat**
- **Single or double monitors in all stations except the student seat**
  - 2 NSF: FD + Student
  - 7 NRC staff – researchers and engineers
  - NSF FD - 2DS, PIP/HVPS, NAWX, time series plots of atmospheric and aircraft states, bulk and other measurements – using QM, PLANET – chat and data

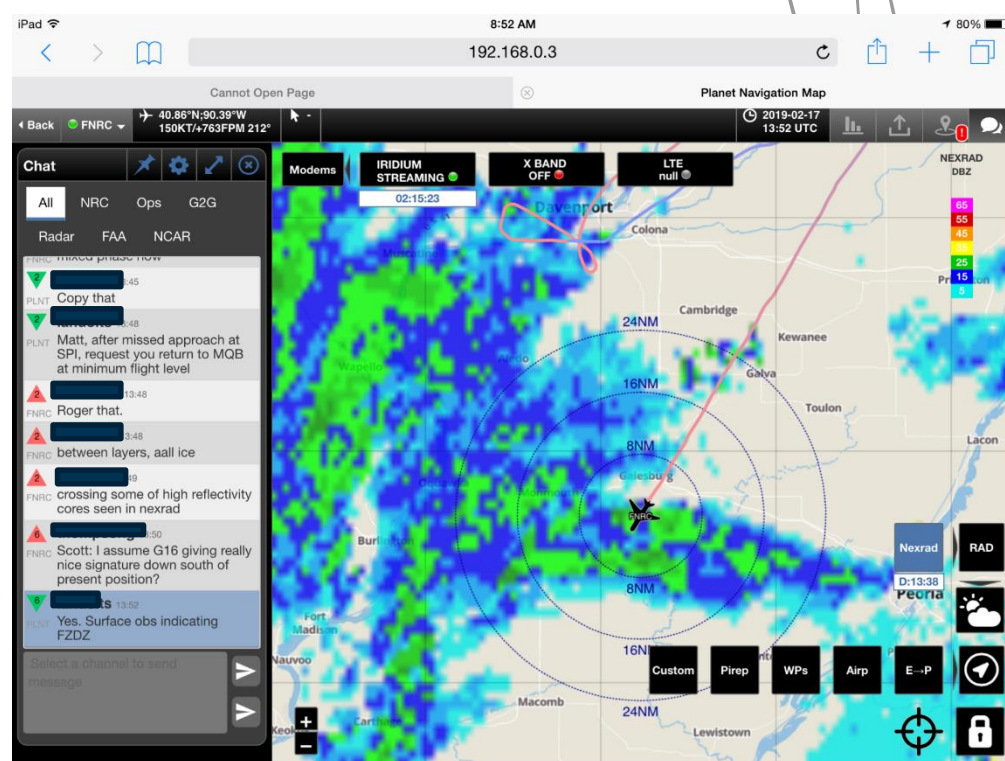

# PLANET | ATMOSPHERE (<https://www.atmosphere.aero>): Main ground-aircraft communication system

Can be configured to receive data from sensors  
Measurement readings and time series of selected  
parameter

NRC will create accounts for all users – Pls please  
submit names that need access of real time tracking  
and data

URL: <https://planet.atmosphere.aero>

Chat b/n Grounds Ops Center (green) and flight  
crew and real time radar data and flight track seen  
both on aircraft and ground ops center

Status: Being configured with new  
ground server

# PLANET Real-time broadcast

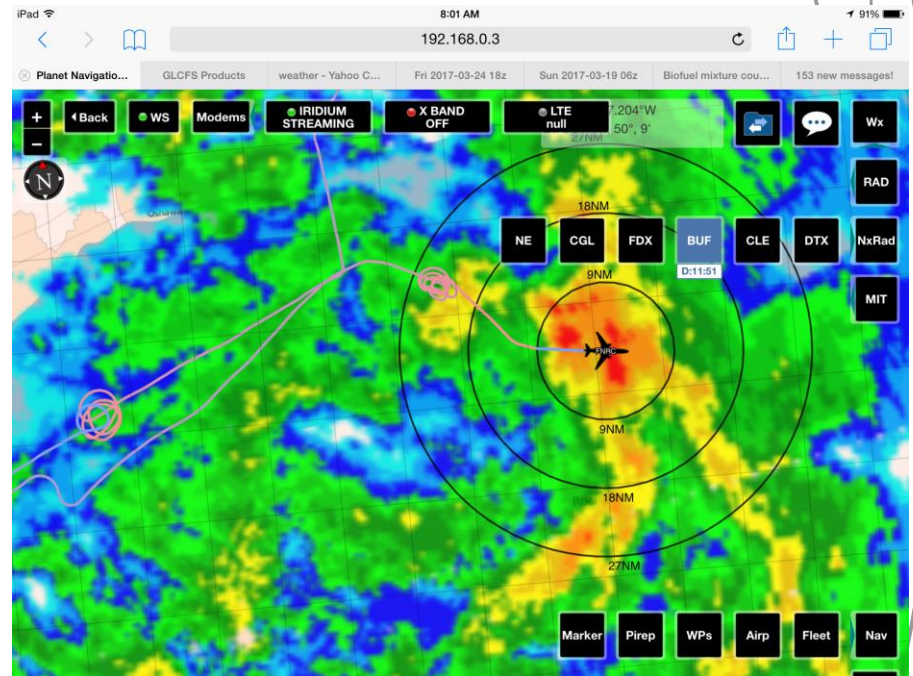

- **Core sensor 1Hz data**
- Aircraft states
  - Latitude, Longitude, Height...
- Atmospheric state
  - T, Td, Ps, winds...
- **Basic cloud microphysics**
  - **CDP**
  - **Nevzorov**
  - **Rosemount Icing Detector**

# Convair High-band width Satcom system

✈ X-band high-band width Satcom system

Status: Application submitted for high band width datalink

# In-flight communication

## Convair has programmable multi-channel audio system

- **NRC FTE/Navigator servers as a primary contact with pilots relaying decisions / observations from FD and co-FD or any other crew**
- **NSF PI: Flight Director**
  - In-flight decisions - flight maneuvers, instrument configurations / modes
  - Relay decisions / requests to NRC FTE allowing enough time to get clearance from ATC
  - Communication and coordination with ground team using PLANET chat
- **NRC co-FD:**
  - Consult / work closely with NSF FD
  - Substitute NSF PI when/if there is a need for portion of the flight
  - Decision/coordination for non-science/sampling flight segments

**Developed by ECCC Air  
Quality group**

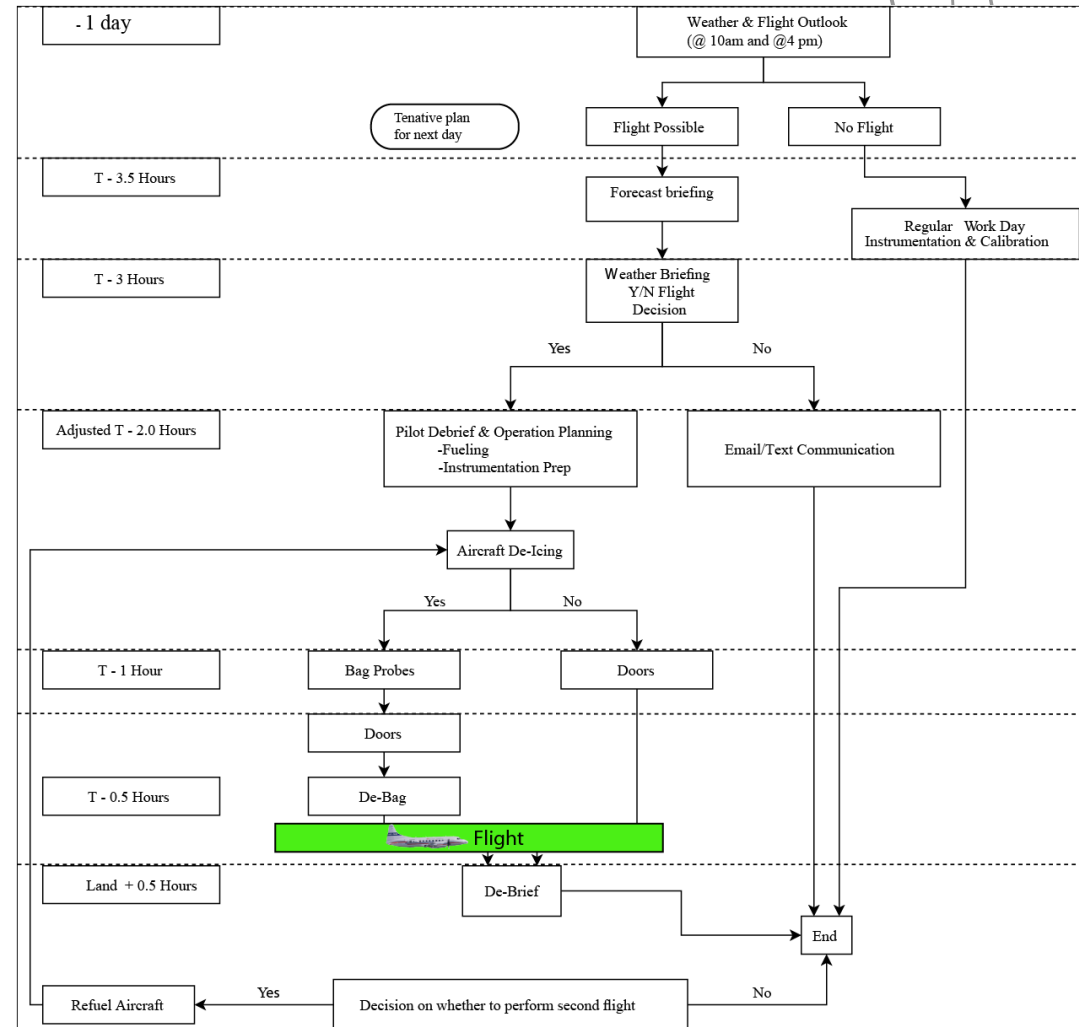

# Flight Operations / Decisions

## Flights:

## M-F:

- 9 am – 4 pm: 3 hours
- Night and early morning flights: > 5 hours
- **Saturday and Sunday**
- 12+ hours
- **NRC Crew and ground support:**
  - 2 pilots (3 staff)
  - 1 AME (2)
  - 7 (10) Research & Instrumentation
  - Core/minimum crew: 4

# Pilot Duty Hours considerations

- **Duty hours max – 13 hours**
- **Minimum of 10 hours before next flight**
- **Maximum of three flight days in a row. After 3 consecutive flight duty, pilots are required to be off duty for at least 36 hours.**
- **NRC has three Convair qualified pilots**
- Each of them support other aircraft operations
- At all times, the lab will allocate two pilots on duty to support wintre-mix. Other assignment will factor duty-hour implications
- Other factors: Family and other personal commitments:
  - One of the pilot will be off work for a week in March

# THANK YOU
